Vital events which occurred in 1962--births, marriages, and deaths--and other significant public health statistics are presented here as a separate document.

The narrative presentation of activities of the New Jersey State Department of Health in 1963 is published separately.

Some persons, such as specialists in community planning, have primary need for the statistical section only. Separate publication of the two documents provides opportunity for somewhat more flexibility in meeting the specific needs of interested persons.

This section contains information about births, marriages, deaths, fetal deaths, and reportable diseases in 1962. Additional statistical data for selected events are given for some previous years.

**REPORT OF THE PUBLIC HEALTH STATISTICS PROGRAM
CALENDAR YEAR, 1962**

Public health statistics information for New Jersey is derived from the vital events records which by law must be filed with the Vital Statistics Registration Program. These records cover births, marriages, deaths and fetal deaths and approximated 232,000 certificates in 1962.

Of interest is the distribution of these events by month of occurrence in New Jersey. The following table points up the fact that the peak months for births were August and September; for marriages the highs were in June and September; and for deaths the peak months were December and March.

Births, Marriages and Deaths in New Jersey By Month of Occurrence: 1962

| Month | Births | Marriages | Deaths |
|-----------|---------|-----------|--------|
| Total | 127,119 | 41,462 | 60,536 |
| January | 10,378 | 2,462 | 5,393 |
| February | 9,665 | 2,609 | 5,179 |

| October | 11,222 | 3,669 | 5,059 |
| November | 10,349 | 3,396 | 5,068 |
| December | 10,614 | 3,116 | 5,549 |

POPULATION: The July 1, 1962 population estimate for New Jersey was 6,344,000. In preparing the estimate, it was assumed that the average yearly change between April 1, 1950 and April 1, 1960 continued to 1962.

RESIDENT BIRTHS: For the first time since 1949 the numerical rise in births was halted in 1962. Dropping by 2.8 percent, live births in 1962 totalled 131,603 as compared with 135,320 in 1961. The crude birth rates were 20.7 per 1,000 population and 21.8, respectively. The 1962 provisional birth rate for the United States was 22.4.

Births out-of-wedlock increased from 5,432 in 1961 to 5,858 in 1962. While illegitimate births accounted for 4.0 percent of live births in 1961, the percentage rose to 4.5 in 1962. Forth-two percent of the births out-of-wedlock occurred to mothers under twenty years of age. Of the 135 infants born to mothers 10-14 years of age, 117 were illegitimate. Another 2,357 illegitimate births occurred to mothers 15-19 years old.

BIRTHS OCCURRING IN NEW JERSEY: Of the 127,119 births which occurred in New Jersey in 1962, only 14 births were attended by midwives. Most deliveries (over 99 percent) occurred in hospitals. An additional 558 babies were delivered by physicians outside of hospitals.

Thirty-two of the babies were triplets and 2,647 were twins. Male babies outnumbered the females, there being 65,264 males and 61,854 females. The ratio of male babies to female babies was 105 to 100.

Immature births (those weighing 2500 grams or less) numbered 10,086 and equalled 8 percent of the 126,657 births for which birth weight was recorded. There were 462 births with weight unknown or not recorded at the time of birth. Weights of babies born in New Jersey and the percent of births in each weight group are shown in the following table.

| <u>Weight Group</u> | <u>Number</u> | <u>Percent</u> |
|-------------------------|---------------|----------------|
| Over 2500 grams | 116,571 | 92.0 |
| 2001-2500 grams, incl. | 6,665 | 5.3 |
| 1501-2000 grams, incl. | 1,843 | 1.5 |
| 1001-1500 grams, incl. | 760 | 0.6 |
| 1000 grams or less | 818 | 0.6 |
| Total with weight given | 126,657 | 100.0 |

MARRIAGES: For the fourth consecutive year there was no change in the marriage rate which held at 6.5 per 1,000 population. However, a numerical increase in marriages from 40,699 in 1961 to 41,462 in 1962 did occur. New Jersey's rate of 6.5 continues below the 1962 provisional marriage rate of 8.5 per 1,000 population for the United States.

Although the popular ages at marriage continue between 20-24 years, teenagers in slightly larger numbers contracted marriages. While 11,888 teen-age brides married in 1962, only 2,998 of these married teen-age grooms. A total of 3,439 grooms married prior to their twentieth birthday. Forty brides were under 15 years of age while the lowest age at marriage for males was 15 years. Five grooms were in this age group.

There were 2,370 widows and 4,667 divorcees married in 1962 as compared with 2,379 widowers and 4,927 divorced men.

DEATHS: In 1962 the resident death rate remained unchanged from the rate of 9.8 (per 1,000 population) recorded in 1961. Deaths from all causes rose from 60,814 in 1961 to 61,967 in 1962. The 1962 provisional rate for the United States was 9.5 per 1,000 population.

A total of 60,536 deaths occurred in New Jersey. Slightly more than 10 percent of these deaths occurred to veterans, most of whom served in either World War I or World War II or in both. There were 3,249 deaths of veterans of World War I; 2,362 deaths of World War II veterans; 92 deaths of veterans serving in both World Wars; 114 deaths of Spanish-American War veterans with an additional 4 deaths of veterans of both the Spanish-American War and World War I; 251 deaths of veterans of the United Nations Forces; and 68 deaths of veterans of other wars. For the remaining 306 deaths, military service was indicated on each death certificate but no war was specified.

INFANT MORTALITY: For the second consecutive year deaths under one year and the infant mortality rate decreased in 1962. Infant deaths dropped from 3,244 in 1961 to 3,149 in 1962 while the infant mortality rate per 1,000 live births was 23.9 in 1962 as compared with 24.0 in 1961. New Jersey's 1962 infant mortality rate was somewhat lower than the provisional rate of 25.3 reported for the United States.

Neonatal deaths (i. e. deaths of infants less than 28 days old) contributed slightly more than 77 percent to total deaths under one year. There were 2,432 neonatal deaths yielding a rate of 18.5 per 1,000 live births in 1962. Comparable figures for 1961 were 2,470 neonatal deaths with a rate of 18.3.

Perinatal deaths (deaths of infants less than seven days old plus fetal deaths) totalled 4,356 in 1962 as against 4,433 in 1961. Perinatal mortality rates per 1,000 deliveries (live births plus fetal deaths) were 32.6 in 1962 and 32.2 in 1961.

MATERNAL DEATHS: In 1962 maternal deaths numbered 43 as against 47 in the year preceding. The maternal mortality rate has not changed since 1959 and remained at 0.3 per 1,000 live births.

FETAL DEATHS: The number of fetal deaths in 1962 was 2,137 as against 2,207 in 1961. Fetal death rates for each of these years were 16.2 and 16.3, respectively.

LEADING CAUSES OF DEATH: As in the two previous years there was no change in the rank order of the first seven leading causes of death. Combined, they accounted for 83 percent of the deaths in 1962. The seven leading causes of death are shown together with the percent of total deaths for which each was responsible.

| <u>Cause</u> | <u>Percent</u> |
|--|----------------|
| 1. Diseases of the circulatory system | 47.8 |
| 2. Malignant neoplasms | 18.3 |
| 3. Vascular lesions affecting the central nervous system | 8.7 |
| 4. Influenza, pneumonia and bronchitis | 3.1 |
| 5. Diabetes mellitus | 2.0 |
| 6. Cirrhosis of liver | 1.8 |
| 7. Motor vehicle accidents | 1.4 |

Mortality rates were lower for malignant neoplasms, vascular lesions, diabetes, and influenza, pneumonia and bronchitis. Higher death rates were noted for diseases of the circulatory system, cirrhosis of liver, and motor vehicle accidents.

HEART DISEASE: A rise in heart disease deaths and death rate occurred in 1962. Deaths involving heart disease totalled 27,366 resulting in a death rate of 431.4 per 100,000 population. For 1961 comparable figures were 26,449 deaths and a heart disease death rate of 426.0.

Arteriosclerotic heart disease, including coronary disease, accounted for 20,993 deaths in 1962. Of these 12,414 occurred in males and 8,579 deaths in females.

Diseases of the circulatory system, which include heart diseases, took 29,604 lives in 1962 as against 28,598 in the year preceding. This group of diseases is the number one destroyer of life in each of the age groups 25-44, 45-64 and 65 and over.

CANCER: Malignant neoplasms, with 11,370 fatalities yielded a death rate of 179.2 per 100,000 in 1962. In 1961 there were 11,194 cancer deaths with a mortality rate of 179.9. Deaths due to cancer of the respiratory system, including cancer of the lung, totalled 1,977 in 1962 and 1,808 in the preceding year. Most of these fatalities were due to cancer of the lung attacking, primarily, males.

VASCULAR LESIONS: Decreases were apparent in both the deaths and death rate attributed to vascular lesions affecting the central nervous system. Deaths dropped to 5,404 from 5,503 deaths in 1961 while the death rate per 100,000 population was 85.2 as against 88.5 in 1961.

INFLUENZA, PNEUMONIA AND BRONCHITIS: In 1962 influenza was responsible for 28 deaths; pneumonia, 1,749 deaths; and bronchitis, 174 deaths. Combined, this group of diseases accounted for 1,951 deaths and a rate of 30.8 per 100,000 population. The 1961 figures were 1,966 deaths and a death rate of 31.6.

DIABETES: A ten percent decrease in the diabetes mortality rate occurred in 1962. A total of 1,263 deaths due to this cause with a rate of 19.9 per 100,000 population were recorded in that year. Diabetes deaths equaled 1,360 and resulted in a rate of 21.9 in 1961.

ALL ACCIDENTS: A slight increase was noted in fatalities resulting from all types of accidents. Accidental deaths in 1962 numbered 2,390 and 2,328 in the year preceding. The fatality rates did not vary appreciably as the rate of 37.7 per 100,000 was only slightly higher than the rate of 37.4 recorded in 1961. However, motor vehicle accidents, the seventh leading cause of death, continued to take a higher toll in 1962. There were 895 deaths and a death rate of 14.1 per 100,000 population. Similar figures for 1961 were 791 fatalities and a rate of 12.7. Accidental falls, appearing as the ninth leading cause of death, took 712 lives as against 692 in 1961. The death rate for this category of accidents was 11.2 per 100,000 population in 1962 and 11.1 in the preceding year. Seventy-one percent of the deaths due to accidental falls occurred to persons in the age group 65 years and over.

SUICIDE: Although not a principle cause of death for all ages, suicide was one of the leading causes of death in the age groups 15-24, 25-44 and 45-64 years. There were 571 deaths due to suicide in 1962 with a rate of 9.0 per 100,000 in 1962. For the preceding year 523 suicides with a death rate of 8.4 were recorded.

Teen-agers accounted for 19 suicides, the youngest being 13 years old. An additional 21 deaths from suicide occurred to persons aged 20-24 years.

DEATHS FROM REPORTABLE DISEASES

TUBERCULOSIS: Among leading causes of death tuberculosis ranked sixteenth in 1962. Tuberculosis deaths and death rates were lower as deaths fell from 389 in 1961 to 326 in 1962 and the rate (per 100,000 population) moved downward from 6.3 to 5.1. In 1962 males accounted for almost three times as many tuberculosis deaths as did females. Incidence of cases in males was twice that of females in 1962.

In addition to the 326 tuberculosis deaths, there was in 1962 a total of 235 deaths statistically assigned to other primary causes of death with tuberculosis mentioned as a secondary cause. In studying the problem of tuberculosis the combined total of 561 deaths should be considered. Of this total, 31 percent or 174 tuberculosis deaths were not reported as cases or were reported after death.

OTHER REPORTABLE DISEASES: Measles claimed nine lives, all under 15 years of age. A sixteen year old female succumbed to diphtheria in 1962; no diphtheria deaths occurred in 1960 or 1961. There were no deaths charged to whooping cough although one occurred in 1961. Streptococcal sore throat accounted for three deaths. Acute poliomyelitis took two lives as against four in 1961.

There were 36 deaths due to infectious hepatitis in 1962 as compared with 24 in 1961. Acute infectious encephalitis was responsible for 23 deaths in 1962 and 18 deaths in the preceding year. Syphilis deaths numbered 50 in 1962 and 71 in 1961.

INFANT DEATHS BY CAUSE AND AGE: 1962

For the first time since 1955 the infant mortality rate for New Jersey dropped below 24 deaths per 1,000 live births. The 1962 infant death rate was 23.9 and deaths under one year numbered 3,149. In 1961 the rate was 24.0 and infant deaths totalled 3,244. From 1955 through 1961 the rate for deaths under one year ranged from 24.0 to 24.5.

The largest number of babies continue to be lost within the first day of life. Of the total deaths under one year in 1961, 40.1 percent failed to survive the first day of life. This percent in 1962 rose to 44.7. Deaths of infants less than one day old amounted to 1,408 in 1962 as compared with 1,301 in 1961.

Over the past ten years there has been a gradual rise in deaths under one day of age. Admittedly an increase in births occurred in each of the nine years preceding 1962. Although a drop in births from 135,320 in 1961 to 131,603 in 1962 was accompanied by a decrease in the overall total of infant deaths in this period, the upward trend continued in deaths and death rates of infants who failed to complete their first day of life. In 1953 the 1,003 deaths in this age group represented 38 percent of the total deaths under one year. This is in contrast to the 45 percent recorded in 1962. The mortality rate for this age group rose from 8.9 per 1,000 live births in 1953 to 10.7 in 1962.

While slightly more than three-fourths of the infants died within the first four weeks of life, the mortality rates show a downward trend for those who survived the first day of life but lived less than one week and those who lived one to four weeks. Shown below are the infant mortality rates, per 1,000 live births, for each age group during 1953, 1961 and 1962.

| <u>Age Group</u> | <u>1962</u> | <u>1961</u> | <u>1953</u> |
|--------------------------------|-------------|-------------|-------------|
| Under 1 day | 10.7 | 9.6 | 8.9 |
| One day but less than 1 week | 6.2 | 6.8 | 7.2 |
| One week but less than 28 days | 1.6 | 1.8 | 2.1 |
| 28 days but less than 1 year | 5.4 | 5.7 | 5.4 |
| Under 1 year | 23.9 | 24.0 | 23.6 |

The deaths of nearly two-thirds of the babies who died under one year of age were attributed to certain diseases of early infancy with postnatal asphyxia and atelectasis being the leading single cause. There were 765 deaths attributed to this cause in 1962 as compared with 718 in 1961. Specifically, postnatal asphyxia and atelectasis together with birth injuries were responsible for the increase noted in deaths under one day.

Infant deaths due to congenital malformations declined from 526 in 1961 to 463 in 1962. More than two-thirds of these occurred before the babies were 28 days old. Diseases of the respiratory system (other than pneumonia of the newborn) rose slightly in 1962 and accounted for 303 infant deaths. Two hundred and ninety six of these deaths occurred to babies who survived 28 days or more but did not complete their first year of life. Immaturity, unqualified was reported as the cause in 528 deaths in 1962. All except 20 were less than a week old at death.

New Jersey continues to have a lower infant death rate than the country as a whole. Provisional 1962 figures for the United States show an infant death rate of 25.3 compared with 23.9 for New Jersey.

Detailed information by age and cause of death appears in the accompanying tables.

With 77 percent of the deaths occurring in the first 27 days of life, it is important to study the relation between immaturity and death by age intervals. The following table presents such data.

In examining the table, it is necessary to remember that "Certain Diseases of Early Infancy" (International Statistical Classification, Major Group XV, Code Numbers 760-776) is the only group which gives an opportunity to determine immaturity on the basis of the physician's statements in the medical certification on the death certificate. However, infant deaths from all causes are included in the table immediately following. The columns labeled "Immaturity Indicated on Death Certificate" pertain to infant deaths coded 760-776 with immaturity indicated on the death certificate. All other infant deaths, (including the balance of deaths coded to 760-776,) were counted in the group labeled "Immaturity Not Indicated on Death Certificate."

INFANT DEATHS BY AGE AND IMMATURIT: 1962

| Age | Total | | Immaturity Indicated on Death Certificate | | Immaturity Not Indicated on Death Certificate | |
|----------|--------|---------|---|---------|---|---------|
| | Number | Percent | Number | Percent | Number | Percent |
| <1 day | 1,408 | 44.7 | 938 | 65.6 | 470 | 27.3 |

| <1 year | 3,149 | 100.0 | 1,430 | 100.0 | 1,719 | 100.0 |

Note: Numbers of deaths for each age classification are cumulative totals from birth to indicated age.
