DEPARTMENT OF HEALTH

JOHN FITCH PLAZA, P.O. BOX 1540, TRENTON, 08625

November, 1967

This report for calendar year 1966 is the fifth annual report of the Public Health Statistics Program of the New Jersey State Department of Health. The statistical information is derived primarily from certificates of live births, marriages, deaths and fetal deaths filed with the Vital Statistics and Registration Program. Morbidity data which appear in this publication are based on case reports collected by the Division of Preventable Diseases. Population estimates are those prepared by the Research and Statistics Section of the Department of Conservation and Economic Development.

A separate report is published by the Department and presents the activities and accomplishments of the various Programs.

A handwritten signature in cursive script that reads "Roscoe P. Kandle".

Roscoe P. Kandle, M.D.
State Commissioner of Health

**Report of the Public Health Statistics Program
Calendar Year, 1966**

The annual statistical report is a general summary, primarily of vital events (births, marriages, deaths and fetal deaths) reported by registrars of 567 municipalities and by out-of-state jurisdictions in which births and deaths to New Jersey residents occurred in 1966. For some events information for previous years is presented to indicate the trend for the most recent period.

Unless otherwise noted, births and deaths are allocated for residence. Marriages are based on place of occurrence.

POPULATION: According to the estimates of population released by the Research and Statistics Section, Department of Conservation and Economic Development, the July 1, 1966 population estimate for New Jersey was 6,959,650. This represents a gain of 14.7 percent over the April 1, 1960 Census of 6,066,782.

The excess of births over deaths in 1966 amounted to 54,460 and was 9.5 percent below the 1965 total. The proportion contributed to population growth through natural increase has been at a lower rate, so that the estimated gain in population is due largely to migration and to the increase in personnel assigned to military posts in New Jersey.

VITAL EVENTS IN NEW JERSEY: The following table presents the number of births, marriages and deaths which occurred in New Jersey in each of the calendar months.

Vital Events Occurring in New Jersey
by Month of Occurrence: 1966

<u>Month</u>	<u>Births</u>	<u>Marriages</u>	<u>Deaths</u>
Total	117,250	46,966	64,704
January	9,401	2,757	5,770
February	8,921	2,959	5,016
March	9,983	2,292	5,546
April	9,592	4,035	5,560
May	9,878	3,927	5,379
June	9,748	5,610	5,175
July	9,945	4,499	5,812
August	10,435	4,675	5,038
September	10,221	4,617	4,884
October	10,008	4,459	5,423
November	9,504	3,747	5,338
December	9,614	3,389	5,763

Approximately 51 percent of the births and 54 percent of the marriages occurred in the second half of the year. Slightly more than half of the deaths occurred in the first half of the year.

BIRTHS IN NEW JERSEY: In 1966 most of the live born babies (99.5 percent) were delivered in hospitals. Physicians attended the births of an additional 362 infants who were not born in a hospital. Seven babies were delivered by midwives. In all, 117,250 live born infants were delivered in New Jersey.

Of the live births which occurred in New Jersey, 51.2 percent were males and 48.8 percent were females. There were 59,999 boys and 57,251 girls born alive. Single births numbered 114,825, twins totalled 2,385, and 40 infants were born as triplets. There were no quadruplets born in New Jersey in 1966.

RESIDENT BIRTHS: A downward trend in the number of resident live births continued for the fifth consecutive year. The decrease in births amounted to 4.0 percent in 1966. In that year there were 120,116 live births as compared with 125,104 in 1965. This was the smallest number of live births recorded since 1955. The State's birth rate dropped to a low of 17.3 per 1,000 population from 18.4 in 1965. Not since 1941 has the birth rate been so low. Based on provisional figures, the birth rate for the United States was down to 18.5 per 1,000 population from 19.4 in 1965.

Live births which occurred to mothers under 20 years of age rose from 13,636 in 1965 to 14,500 in 1966. Teen-age mothers accounted for 12.1 percent of the live births in 1966, up from 10.9 percent in 1965. Births to mothers in each of the remaining age groups were lower than in 1965.

The fertility rate for women 15-44 years of age amounted to 83.7 per 1,000 women of child-bearing age. This compared with a rate of 89.2 per 1,000 females aged 15-44 years in 1965.

Unmarried mothers accounted for 8,634 live births or 7.2 percent of the 120,116 resident births which occurred in 1966. In the preceding year there were 8,035 births out-of-wedlock, representing 6.4 percent of the resident births recorded in 1965.

Of the 234 infants born to mothers under 15 years of age 213 were recorded as born out-of-wedlock. Mothers 15-19 years of age bore 14,266 children of whom 3,892 were illegitimate. Women between the ages of 20-24 were responsible for an additional 2,833 births out-of-wedlock. Four-fifths of the illegitimate births were born to women under 25 years of age.

RESIDENT BIRTHS BY WEIGHT GROUP: Most birth certificates contained the weight of the child at the time of birth. Information on weight was omitted on 1,517 certificates and this number was excluded from the following table.

Resident Births by Weight Group, Number and Percent

<u>Weight Group</u>	<u>Number</u>	<u>Percent</u>
5001 grams or more	134	0.1
4501-5000 grams	1,217	1.0
4001-4500 grams	7,399	6.2
3501-4000 grams	29,019	24.5
3001-3500 grams	46,255	39.0
2501-3000 grams	24,545	20.7
2001-2500 grams	6,574	5.5
1501-2000 grams	1,931	1.6
1001-1500 grams	775	0.7
<u>1000 grams or less</u>	<u>750</u>	<u>0.6</u>
Total with weight given	118,599	99.9

Over 91 percent of the live born infants weighed 2501 grams or more. The concentration of births (39 percent) was in the weight group 3001-3500 grams. Immature births (2500 grams or less) comprised 8.4 percent of the births and numbered 10,030 infants. Included in the total of immature births were 1,380 children who were born out-of-wedlock.

MARRIAGES: For the eighth consecutive year marriages continued to rise and, in 1966, the total was 1.5 percent above that for 1965. Marriages numbered 46,966 in 1966 and resulted in a rate of 6.7 per 1,000 estimated population. Comparable figures for 1965 were 46,281 marriages with a rate of 6.8. The provisional marriage rate for the United States in 1966 was 9.4 per 1,000 population and 9.2 in 1965.

Teen-age brides and grooms numbered 17,065 and rose 3.9 percent above the total of 16,430 teenagers married in 1965. These young adults comprised 18.2 percent of the persons married in 1966 as against 17.7 percent in 1965. In 1966, 71 percent of all brides and 55 percent of the grooms were under 25 years of age at the time of marriage.

First marriages for both parties amounted to 35,816. In addition 2,550 widows, 2,615 widowers, 5,386 divorcees and 5,648 divorced males married during the year.

Approximately 32 percent of the marriages were performed in June, August and September, the favorite months for weddings.

DEATHS: A total of 65,656 resident deaths occurred in 1966 and was 1.1 percent above the 1965 total of 64,942 deaths. There was a slight change downward in the mortality rate from 9.5 per 1,000 population in 1965 to 9.4. The provisional 1966 death rate for the United States was 9.5 per 1,000 population and 9.4 in the preceding year.

INFANT MORTALITY: Deaths of infants under one year of age declined from 2,918 in 1965 to 2,688 deaths in 1966 or 7.9 percent. The infant mortality rate amounted to 22.4 per 1,000 live births in 1966 as compared with the rate of 23.3 in 1965. New Jersey's infant death rate was below the provisional rate of 23.4 for the United States in 1966.

The loss of infants was greatest within the first day of life, since 1,216 infants or 45 percent of the total succumbed during this period. Of the 2,688 deaths under one year, 76 percent occurred to babies less than 28 days old.

Neonatal deaths numbered 2,047 as compared with 2,193 in 1965. Although in 1966 there were 146 fewer deaths of infants less than 28 days old, the neonatal mortality rate of 17.0 per 1,000 live births showed very little change from the 1965 rate of 17.5.

Deaths of infants under 7 days of age amounted to 1,878 and, combined with 1,865 fetal deaths which occurred in 1966, constituted 3,743 perinatal deaths. This category of deaths was lower by 7.1 percent when compared to the 4,028 perinatal deaths in 1965. Perinatal mortality rates amounted to 31.7 per 1,000 total deliveries in 1965 and 30.7 in 1966.

MATERNAL DEATHS: Very little change in the maternal deaths and death rate occurred in 1966. Maternal deaths totalled 41 as against 44 in 1965 and the death rate in 1966 was 0.3 per 1,000 live births, down from a rate of 0.4 in 1965. The maternal mortality rate, since 1956, has not been less than 0.3 nor more than 0.4.

Of the 41 maternal deaths, 19 were due to complications of pregnancy, 11 to abortions, 1 due to delivery without mention of complication, and 10 deaths due to delivery with specified complications. Most of these deaths (31) occurred in women who were 25-44 years of age; nine were between the ages 15-24 and one was in the age group 45 years or over.

FETAL DEATHS: In 1966 fetal deaths (stillbirths) amounted to 1,865 and yielded a fetal death rate of 15.5 per 1,000 live births. The preceding year's total of 1,991 fetal deaths and its accompanying rate of 15.9 were higher.

LEADING CAUSES OF DEATH: Approximately 84 percent of all deaths were assigned to one of seven selected causes or groups of causes of death. The number of deaths charged to each category and the percent of total deaths each group represented are shown below.

<u>Cause</u>	<u>Deaths</u>	<u>Percent</u>
1. Diseases of the circulatory system	31,355	47.8
2. Malignant neoplasms	11,997	18.3
3. Vascular lesions affecting the central nervous system	5,904	9.0
4. Influenza, pneumonia and bronchitis	2,157	3.3
5. Diabetes	1,388	2.1
6. Cirrhosis of liver	1,175	1.8
7. Motor vehicle accidents	1,135	1.7

DISEASES OF THE CIRCULATORY SYSTEM: As a group diseases of the circulatory system claimed almost 48 percent of the total deaths which occurred during 1966. Among the principal causes of death, this category of diseases ranks first in order of frequency and, based on the total of 31,355 deaths in 1966, is responsible for almost three times as many fatalities as its next competitor, cancer. The largest proportion of these deaths occurred to persons 45 years old and over.

Deaths due to heart diseases account for the major portion of deaths due to diseases of the circulatory system. In 1966 persons who succumbed to heart disease numbered 28,815 as compared with 28,414 in 1965. The resulting mortality rates, per 100,000 population, were 414.0 in 1966 and 417.6 in 1965.

For most of these victims of heart disease, the underlying cause of death was stated as arteriosclerotic heart disease, including coronary disease. There were 23,439 fatalities attributed to this cause or 2.9 percent higher than the total of 22,786 deaths in 1965.

Many arteriosclerotic heart disease deaths occur suddenly and are certified by medical examiners or coroners. If autopsies are held, autopsy findings are rarely reflected in the medical certification since a death certificate is generally filed with the local registrar before the autopsy report is available. Both the number of deaths and death rates shown for heart diseases should be viewed with caution.

CANCER: Deaths due to malignant neoplasms declined slightly from 12,063 in 1965 to 11,997 deaths in 1966. Cancer continued as the second leading cause of death for all ages and was responsible for slightly more than 18 percent of the total deaths. The overall cancer mortality rate of 172.4 per 100,000 estimated population was below the death rate of 177.3 for 1965.

In 1966 deaths due to malignant neoplasms of buccal cavity and pharynx and of the digestive organs and peritoneum were lower than in 1965. Higher were cancer deaths of the respiratory system, of the breast and genito-urinary system and of the lymphatic and hemotopoietic tissues.

VASCULAR LESIONS:- Nine percent of the total deaths were charged to vascular lesions affecting the central nervous system, the third principal cause of death. Deaths assigned to this group of causes exceeded the 1965 total by 4 percent, having risen from 5,678 in 1965 to 5,904 in 1966. In 1966 the mortality rate was 84.8 per 100,000 population and 83.5 in the year preceding.

SELECTED RESPIRATORY DISEASES: In fourth position among the leading causes of death were pneumonia, influenza and bronchitis as a group. Comprised of 29 influenza deaths, 1,932 pneumonia deaths and 196 bronchitis deaths, the total of 2,157 was only slightly above the 2,126 deaths due to these causes in 1965. The mortality rates remained about the same in both years, 31.0 per 100,000 population in 1966 and 31.2 in 1965.

Deaths from aschma numbered 100 as compared with 120 in 1965. Emphysema, without mention of bronchitis, took 517 lives as against 502 in 1965. Tuberculosis of the respiratory system was responsible for 281 deaths in 1966 and 268 in the preceding year. Cancer of the respiratory system (not specified as secondary) accounted for 2,275 deaths in 1966 as against 2,212 in 1965.

This group of respiratory diseases takes its largest toll from those 45 years of age and older. More males than females succumb to these diseases.

DIABETES: Over two percent of total deaths were due to diabetes which continues as a fifth leading cause of death. There were 1,388 diabetes deaths in 1966 with a mortality rate of 19.9 per 100,000 population. Comparable figures for 1965 were 1,304 deaths and a rate of 19.2. More females (849) than males (539) died of diabetes.

ALL ACCIDENTS: Fatalities resulting from all types of accidents were higher by 4.6 percent, having risen from 2,783 deaths in 1965 to 2,910 deaths in 1966. Mortality rates, per 100,000 population, were 41.8 in 1966 and 40.9 in 1965. As a single cause of death accidents appear as fourth highest among leading causes of death.

Motor vehicle accidents terminated the lives of 1,135 persons in 1966, one less than in 1965. Four infants under one year of age and 31 children of pre-school age died as a result of motor vehicle accidents. In the age group 5-14 years, motor vehicle accidents were responsible for 102 fatalities or 20 percent of all the deaths which occurred in this age group. Deaths due to motor vehicle accidents rose from 299 in 1965 to 338 in 1966 in the age group 15-24 years. Although deaths from motor vehicle accidents were lower among those who were 25 years of age or older, 262 fatalities occurred in the age group 25-44, 235 deaths in those 45-64 years of age and 163 deaths in the age group 65 years and over.

Accidental falls caused 747 deaths in 1966 as compared with 673 in 1965. There were 106 deaths as a result of a fall on stairs, 14 due to falls from ladders, 112 deaths due to falls from one level to another, 120 deaths which occurred from falls on the same level and 395 deaths which were not specified as to type of fall. Of the 747 fatalities, more than 70 percent occurred to persons 65 years old or more. In all 360 males and 387 females died as a result of accidental falls.

DEATHS FROM OTHER SELECTED CAUSES: Tuberculosis deaths increased slightly, from 293 deaths in 1965 to 297 in 1966. In both years the death rate was 4.3 per 100,000 population.

There were no deaths from acute poliomyelitis although one death was charged to late effects of poliomyelitis. Three deaths were due to measles, 25 deaths resulted from infectious encephalitis, and 29 deaths were due to infectious hepatitis. One death was charged to streptococcal sore throat, two to whooping cough, 15 to meningococcal meningitis and three deaths to tetanus. No deaths from diphtheria, typhoid fever or smallpox occurred.

TABLE 1: POPULATION ESTIMATES, BIRTHS, MARRIAGES (by Occurrence) and DEATHS
 Numbers and Rates per 1,000 population: 1942 - 1966

YEAR.	JULY 1 ESTIMATED POPULATION	BIRTHS		MARRIAGES		DEATHS	
		Number	Rate	Number	Rate	Number	Rate
1942	4,226,426	80,812	19.1	50,498	11.9	46,270	10.9
1943	4,235,233	82,356	19.4	41,045	9.7	49,781	11.8
1944	4,167,840	75,652	18.2	36,084	8.7	47,340	11.4
1945	4,200,941	76,995	18.3	39,711	9.5	47,633	11.3
1946	4,304,261	95,044	22.1	61,020	14.2	46,261	10.7

REPORT ON INFANT DEATHS BY CAUSE AND AGE: 1966

A decline of 7.9 percent in the number of deaths under one year of age occurred in 1966 when the infant deaths dropped from 2,918 in 1965 to 2,668. The infant mortality rate per 1,000 live births amounted to 22.4 in 1966 and was below the rate of 23.3 recorded a year earlier.

Infants who failed to survive the first day of life numbered 1,216 as against 1,327 deaths in 1965, and accounted for 45.2 percent of the total deaths under one year of age. Since 1964 the percent of deaths under one day to total infant deaths remained at approximately the same percentage level. The mortality rate for infants less than a day old was 10.1 per 1,000 live births as compared with 10.6 in 1965. As can be seen from the following table, both the New Jersey rate for 1966 and the latest available United States rate are well above the 1954 rates for this age category.

There was also a decline in the number of deaths of babies who survived the first day of life but did not complete the first week of life. These deaths numbered 662 in 1966 and 710 in 1965. The mortality rate for this group of infants was about the same in both years, 5.5 in 1966 as against 5.7 per 1,000 live births in 1965. Babies who lived beyond the first day but did not complete the first week of life accounted for 24.6 percent of all deaths under one year of age.

An additional 6.3 percent of the infants who died managed to live through the first week but did not complete the first 28 days. There were 169 such infants, resulting in an infant mortality rate of 1.4 per 1,000 live births. In 1965 there were 156 deaths and the infant mortality rate was 1.2.

Infants who lived beyond the first 28 days of life but succumbed before reaching their first birthday accounted for 641 deaths or 23.8 percent of all deaths under one year. A year earlier the number of deaths in this age group was higher, amounting to 725 deaths. The infant mortality rate per 1,000 live births also declined from 5.8 in 1965 to 5.3 in 1966.

Infant mortality rates by age for New Jersey and the United States appear in the following table for the years 1954-1966. It should be noted that during this period of time both the jurisdictions showed an improvement in their infant mortality rates. While the infant death rate for the United States had declined 12.0 percent during this period, New Jersey's rate dropped only 5.1 percent since 1954.

Infant Death Rates, Per 1,000 Live Births, By Age Group

1954	23.6	26.6	9.1	9.6	6.4	7.1	2.1	2.3	6.0	7.5

Note: Individual age rates do not add to total rate for each year due to rounding of figures.

Certain Diseases of Early Infancy, as a group, accounted for 1,739 deaths or 64.7 percent of all deaths under one year of age. Most of these deaths were associated with prematurity and a sizeable number occurred to infants less than a day old. More than 61 percent of the deaths in this overall category were assigned to such nonspecific diagnostic groups as postnatal asphyxia and atelectasis, and immaturity.

From 1963 to 1966 a decline of 33.4 percent was noted in the number of deaths diagnosed as due to postnatal asphyxia and atelectasis. The decrease was from 827 deaths in 1963 to 551 deaths in 1966. In 1963 twenty-six percent of all deaths under one year of age were charged to this cause while, in 1966, this percentage dropped to 20.5 percent. Immaturity, as a cause of death, showed very little numerical change and deaths totalled 511 in 1966 as compared with 535 deaths in 1963. Deaths statistically assigned to immaturity represented 19.0 percent of all infant deaths in 1966 as compared with 16.8 percent in 1963.

Among the more specific causes of death, congenital malformations were responsible for 368 infant deaths or 13.7 percent of all infant deaths. These deaths were fewer by 22 percent, having dropped from 473 deaths in 1965. Diseases of the respiratory system took 272 lives in 1966 and represented 10.1 percent of the total infant deaths, about the same as in 1965. Included in the 272 deaths were two deaths from influenza and 246 deaths due to pneumonia (exclusive of pneumonia of the newborn).

Deaths attributed to birth injuries were somewhat lower and amounted to 196 deaths or 7.3 percent of infant deaths. Comparative figures for 1965 were 219 deaths and 7.5 percent. Infants whose deaths were charged to accidents totalled 114 in 1966 as compared with 107 a year earlier. Expressed as a percent of the total infant deaths, accidents were responsible for 4.2 percent in 1966 and 3.7 percent in 1965.

Other diseases which took a somewhat lesser toll were diseases of the digestive system and infective and parasitic diseases. Diseases of the digestive system accounted for 2.1 percent of all infant deaths and the total of 56 deaths was below that of 82 deaths which occurred in 1965. Deaths due to infective and parasitic diseases rose from 20 in 1965 to 34 in 1966. This latter figure represents 1.3 percent of deaths under one year.

The following tables show infant deaths by age and immaturity, and by cause and age for New Jersey in 1966. The columns labeled "Immaturity Indicated on Death Certificate" pertain to infant deaths coded 760-776 with immaturity indicated on the death certificate. All other infant deaths (including the balance of deaths coded to 760-776) were counted in the group labeled "Immaturity Not Indicated on Death Certificate."

Infant Deaths by Age and Immaturity: 1966

Age	Total		Immaturity Indicated on Death Certificate		Immaturity Not Indicated on Death Certificate	
	Number	Percent	Number	Percent	Number	Percent
< 1 day	1,216	45.2	890	67.1	326	23.9
< 1 week	1,878	69.9	1,274	96.1	604	44.3
< 28 days	2,047	76.2	1,316	99.2	731	53.7
< 1 year	2,688	100.0	1,326	100.0	1,362	100.0

Note: Numbers of deaths for each age classification are cumulative totals from birth to indicated age.
