DEPARTMENT OF HEALTH

JOHN FITCH PLAZA, P.O. BOX 1540, TRENTON, N. J. 08625

November 1969

The Public Health Statistics Program of the New Jersey State Department of Health presents statistical information concerning New Jersey's population, births, marriages, deaths and fetal deaths for calendar year 1968.

Two changes are called to your attention. The size of the booklet is reduced for easier handling. The Eighth Revision of the International Classification of Diseases adapted for use in the United States (ICDA) is used to classify the medical data appearing on 1968 death certificates. For prior years, 1958-1967, the Seventh Revision was used to assign cause-of-death codes.

A handwritten signature in cursive script that reads "Roscoe P. Kandle".

Roscoe P. Kandle, M.D.
State Commissioner of Health

TABLE OF CONTENTS

Table No.	Page No.
Report of the Public Health Statistics Program Calendar Year, 1968	1
1. Population Estimates, Births, Marriages (by Occurrence) And Deaths, Numbers And Rates Per 1,000 Population: 1944 – 1968	9
2. Births By Legitimacy By Counties And Major Cities: 1968	10
3. Resident Births By Weight Group By Age Group Of Mother: 1968	11
4. Births, Marriages By Occurrence, Deaths, Infant Deaths And Maternal Deaths By Counties And Major Cities (Numbers and Rates): 1968	12
5. Marriages In New Jersey By Age Of Husband By Age Of Wife: 1968	13
6. Births And Infant, Neonatal, Fetal, Perinatal And Maternal Deaths (Numbers and Rates): 1944 – 1968	14
7. Infant Deaths, Neonatal Deaths And Perinatal Deaths By Counties And Major Cities: 1968	15
8. Infant Deaths By Cause And Age: 1968	16
9. Births, Marriages, Deaths, Fetal Deaths, Infant Deaths And Neonatal Deaths By Counties And Municipalities: 1968	18
10. Tuberculosis Deaths By Counties And Major Cities Numbers And Rates Per 100,000 Population: 1967 – 1968	32
11. Cases Of Syphilis By Stage And Gonorrhea, Numbers And Rates Per 100,000 Estimated Population (Civilian Cases Only): 1949 – 1968	33
12. Venereal Disease Cases (Including Military) By Age Groups: 1968	34
13. Syphilis Cases (Including Military) By Age Groups: 1968	34
14. Syphilis And Gonorrhea Cases By Counties And Major Cities Numbers And Rates Per 100,000 Estimated Population: 1968	35
15. Principal Causes Of Death By Specified Age Groups: 1968	36
16. Motor Vehicle Deaths In New Jersey By Cause Of Death By Age: 1968	38
17. Deaths Due To Accidents By Cause Of Accident For Selected Age Groups Number And Rank: 1968	39

**Report of the Public Health Statistics Program
Calendar Year, 1968**

Records of births, marriages, deaths, and fetal deaths are the primary source of data presented in this report for calendar year 1968. Except for marriages, the information on all events is given by place of residence. Marriages are assigned to the places in which the events occurred.

Beginning with January 1968, the Eighth Revision of the International Classification of Diseases was adopted for use by the New Jersey State Department of Health. Many important changes were made in the Eighth Revision, so that there are differences between this Revision and the Seventh Revision used in assigning causes of death between 1958 and 1967. Reference should be made to each Revision in order to understand the statistical classification of the underlying causes of death.

POPULATION: Continuing its population growth, New Jersey was estimated to have 7,203,510 persons as of July 1, 1968. The average annual increase amounted to slightly over 2.3 percent or 18.7 percent for the period 1960-1968.

Five counties, each of which exceeded the half million mark in population, were Bergen (913,520), Essex (966,560), Hudson (607,230), Middlesex (578,090) and Union (575,190). At the other extreme, there were five counties whose combined population (330,730) was well under 500,000. These counties were Cape May, Hunterdon, Salem, Sussex and Warren.

Growth in population resulting from net natural increase amounted to 45,527 in 1968 as compared with 50,497 in 1967. The major portion of the gain in population during 1968 came from net migration change which accounted for 79,583 persons or 63.6 percent of the total increase.

VITAL EVENTS IN NEW JERSEY: Fewer births and more marriages and deaths occurred in the State in 1968 than in 1967. These events are shown by month of occurrence in the following table.

Vital Events Occurring in New Jersey
By Month of Occurrence: 1968

<u>Month</u>	<u>Births</u>	<u>Marriages</u>	<u>Deaths</u>
Total	110,781	53,857	67,065
January	8,736	2,744	6,839
February	8,588	3,270	5,360
March	9,184	3,100	5,471
April	8,937	3,829	5,235
May	9,166	4,238	5,269
June	9,335	7,532	5,327
July	9,757	4,488	5,706
August	9,600	6,502	5,277
September	9,442	5,203	4,984
October	9,454	4,481	5,364
November	9,040	4,632	5,436
December	9,542	3,838	6,797

BIRTHS IN NEW JERSEY: Most births (110,292 or 99.6 percent) were hospital deliveries while 268 births or 0.2 percent were attended by physicians but delivery was not in a hospital. Midwives accounted for four deliveries.

Of the total live births which occurred in New Jersey, 56,695 (51.2 percent) were males and 54,086 (48.8 percent) were females. The sex ratio of 1,048 males per 1,000 females remained the same in 1968 as in 1967. Single births numbered 108,510, twin babies totalled 2,232 and 38 infants were triplets. One birth certificate did not give information on plurality of birth.

RESIDENT BIRTHS: There were 114,101 resident live births and a birth rate of 15.8 per 1,000 population in 1968. The reduction in births amounted to 1.7 percent in 1968 when compared with 116,091 resident births in 1967. The downward trend in the number of births began after 1961 when New Jersey had the highest number (135,320 births) recorded. The current birth rate is the lowest annual rate since 1940 when it was 14.3 per 1,000 population. The provisional live birth rate for the United States in 1968 was 17.4 per 1,000 population.

A comparison of 1967 and 1968 resident births by age of mother appears in the following table. In 1968 fewer births occurred to mothers in age groups 20-24 years, 30-34 years and 35-44 years. An increase of 5.1 percent occurred in births to mothers 25-29 years old.

Resident Births by Age of Mother
With Percent Change Between 1967-1968

Age Group of Mother	Number of Births		Percent Change
	1968	1967	
All Ages	114,101	116,091	- 1.7
< 20 years	13,786	13,679	0.8
20 - 24 years	38,625	40,281	- 4.1
25 - 29 years	34,219	32,570	5.1
30 - 34 years	16,753	17,610	- 4.9
35 - 44 years	10,573	11,796	-10.4
45 +	138	137	0.7
Age Unstated	7	18	

FERTILITY RATE: Continuing downward, the fertility rate in 1968 amounted to 76.8 births per 1,000 resident females 15-44 years of age. This was lower than the fertility rate of 79.6 births in the preceding year and well below the estimated fertility rate of 84.8 births for the United States in 1968.

ILLEGITIMATE BIRTHS: The upward trend in births to unwed mothers continued and resulted in a 6.7 percent increase over 1967. Of the 114,101 resident births, 9,889 or 8.7 percent of the total were born out-of-wedlock. In 1967 there were 9,267 births (8.0 percent) in this category.

Distribution by age group of mother shows that births to unwed mothers were higher, especially among teens and in the age group 20-24 years. Although teenagers accounted for 12.1 percent of all resident births, they were responsible for 48 percent (4,786 babies) of the 9,889 births out-of-wedlock in 1968. Comparable figures for 1967 were 11.8 percent of the total births and 47 percent (4,387 babies) of the illegitimate births. There were 3,261 infants born out-of-wedlock to mothers 20-24 years of age in 1968 and 3,070 births in 1967, an increase of 6.2 percent. The following table presents resident births by legitimacy status according to mother's age.

Live Births by Legitimacy by Age of Mother

Age of Mother	Total		Legitimate		Illegitimate	
	Number	Percent	Number	Percent	Number	Percent
All Ages	114,101 ⁽¹⁾	100.0	104,211	100.0	9,889	100.0
10 - 14	249	0.2	19	< 0.1	230	2.3
15 - 19	13,537	11.9	8,981	8.6	4,556	46.1
20 - 24	38,625	33.8	35,364	33.9	3,261	33.0
25 - 29	34,219	30.0	33,137	31.8	1,082	10.9
30 - 34	16,753	14.7	16,269	15.6	484	4.9
35 - 39	8,284	7.3	8,075	7.7	209	2.1
40 - 44	2,289	2.0	2,226	2.1	63	0.6
45 - 49	136	0.1	134	0.1	2	< 0.1
50 - 54	2	< 0.1	2	< 0.1		
Unknown	7 ⁽¹⁾	< 0.1	4	< 0.1	2	< 0.1

Note: Birth certificates with legitimacy unstated amounted to 1 in reference (1).

RESIDENT BIRTHS BY BIRTH WEIGHT: Improvement in reporting birth weight on the revised birth certificate forms, introduced for use in 1968, resulted in less frequent omission of this item than in the past. Birth weight was omitted on 557 birth certificates in 1968 as compared with 1,548 birth certificates in 1967.

Distribution of births according to weight at the time of birth is shown in the following table for 113,544 resident births and 9,882 illegitimate births. (Weight was omitted for 7 births out-of-wedlock). Overweight infants or those weighing 5000 grams or more totalled 1,288 and were 1.1 percent of the total. At the other extreme, premature babies or those weighing 2500 grams or less numbered 9,650 infants and represented 8.5 percent of the total. Of the 9,650 premature infants, 1,536 or 15.9 percent were illegitimate.

31

Resident Births by Weight Group
Total and Illegitimate Births

Weight Group	Total Resident Births		Illegitimate Births	
	Number	Percent	Number	Percent
5001 grams or more	152	0.1	5	< 0.1
4501-5000 grams	1,136	1.0	24	0.2
4001-4500 grams	7,185	6.3	316	3.2
3501-4000 grams	27,776	24.5	1,594	16.1
3001-3500 grams	44,311	39.0	3,674	37.2
2501-3000 grams	23,334	20.6	2,740	27.7
2001-2500 grams	6,359	5.6	867	8.8
1501-2000 grams	1,791	1.6	307	3.1
1001-1500 grams	797	0.7	153	1.5
1000 grams or less	703	0.6	209	2.1
Total with weight given	113,544	100.0	9,882	99.95

MARRIAGES: A continued rise in both the number of marriages performed in New Jersey and the marriage rate was noted in 1968. Marriages numbered 53,857 and exceeded the 1967 total of 49,132 by 9.6 percent. In 1968 the marriage rate per 1,000 population was 7.5 as compared with a rate of 6.9 a year earlier. The provisional 1968 marriage rate for the nation as a whole was 10.3 per 1,000 population and was considerably above the State's rate for the year.

Most brides and grooms were between the ages of 20-24 years and in 1968 this age group accounted for 49.4 percent of all persons married. More teenagers married in 1968 than in the preceding year. There were 16,628 teen-age brides and grooms as compared with 15,977 in 1967. The high for this age group was reached in 1966 when 17,065 persons under 20 years of age were married.

First marriages totalled 41,864 or 77.7 percent of all marriages performed. In 1968 there were 2,657 widows and 2,598 widowers who were married. Persons previously divorced but remarried in 1968 numbered 5,750 females and 6,322 males.

The seasonal distribution of marriages by month of occurrence showed that June, August and September, in that rank order, were the most popular months for marriages. June, the peak month, accounted for 14 percent of all marriages while August was a close second with 12 percent of the marriages to its credit.

DEATHS: There were 68,574 deaths in 1968 as compared with 65,594 deaths a year earlier. The resultant death rate of 9.5 per 1,000 population was above the mortality rate of 9.3 in 1967. New Jersey's death rate in 1968 was comparable with the provisional rate of 9.6 per 1,000 population for the United States.

Undoubtedly, the influenza outbreak in 1968 contributed to higher overall death rates for both New Jersey and the United States.

INFANT DEATHS: Deaths of infants less than a year old declined from 2,578 deaths in 1967 to 2,469 in 1968 and the infant mortality rate dropped from 22.2 infants per 1,000 live births to 21.6. The reduction in the infant mortality rate amounted

to 2.7 percent in 1968. New Jersey's infant mortality rate was slightly below the provisional rate of 21.7 for the United States.

Infant deaths represented 3.6 percent of the total deaths in 1968 and 3.9 percent of all deaths in the preceding year.

A large proportion (47 percent) of infants less than a year old died before they completed the first day of life. In this category were 1,161 infants. An additional 585 babies (23.7 percent) survived the first day but failed to complete the first week.

Deaths of infants less than 28 days old amounted to 1,915 and the neonatal mortality rate of 16.8 per 1,000 live births was somewhat higher than the estimated rate of 15.9 for the United States. A year earlier, New Jersey's neonatal death rate was 17.2 per 1,000 live births as compared with 16.5 for the United States.

Perinatal deaths and death rate were lower in 1968 due mostly to a change in statistical procedures. Fetal deaths, which are represented in the computation of perinatal mortality, exclude all reported products of conception which had a gestation period of less than 20 weeks. This procedure was initiated in 1968 and resulted in lowering the fetal death count. (See Fetal Deaths for additional explanation.)

In 1968 perinatal deaths (deaths of infants less than seven days old and fetal deaths) numbered 3,330 as against 3,715 in 1967. The perinatal mortality rate was 28.8 per 1,000 total deliveries (live births plus fetal deaths).

MATERNAL DEATHS: Deaths resulting from complications of pregnancy, childbirth and the puerperium were lower, having dropped from 45 in 1967 to 32 in 1968. The resultant numerical decrease amounted to 28.9 percent. The maternal mortality rate amounted to 0.3 per 1,000 live births in 1968 and 0.4 deaths in 1967. The range of maternal mortality rates since 1956, has been between 0.3 and 0.4. The ratio of maternal deaths to live births was one maternal death for every 3,566 live births in 1968.

FETAL DEATHS: There were 1,584 fetal deaths recorded in 1968 and the fetal death rate amounted to 13.9 per 1,000 live births. This was below the 1,887 fetal deaths and a fetal death rate of 16.3 which occurred a year earlier.

It is reasonable to assume that since fewer births occurred in 1968, fewer fetal deaths occurred in the same period. The major portion of the decline in fetal deaths is due, primarily, to a change in statistical procedures. Beginning with 1968, fetal death certificates showing less than a 20 weeks gestation period were excluded from the count of fetal deaths.

New Jersey requires the filing of a death certificate for a fetus of 20 or more weeks gestation. On interchange of certificates, fetal death certificates for all products of conception were received from out-of-state jurisdictions and these were included in the count of fetal deaths prior to 1968.

LEADING CAUSES OF DEATH: The following causes or groups of causes of death were selected as the leading causes for 1968. The diseases appear in order of frequency and, for each, the percent of total deaths is shown. To this group of

causes, approximately 83 percent of total deaths was assigned.

<u>Rank</u>	<u>Causes</u>	<u>Deaths</u>	<u>Percent</u>
1	Diseases of the heart	29,577	43.1
2	Malignant neoplasms	12,897	18.8
3	Cerebrovascular disease	6,204	9.0
4	All Accidents	2,933	4.3
5	Influenza and pneumonia	2,378	3.5
6	Diabetes	1,491	2.2
7	Cirrhosis of liver	1,259	1.8

DISEASES OF THE HEART: The largest percentage (43) of total deaths was attributed to heart diseases. In 1968, the mortality rate per 100,000 population was 410.6 and deaths numbered 29,577. These deaths, according to the Eighth Revision of the International Statistical Classification of Diseases, were distributed as follows:

<u>8th Revision Intern'l. List No.</u>	<u>Description</u>	<u>Number</u>	<u>% of Total</u>
390-398	Active rheumatic fever and chronic rheumatic heart disease	703	2.4
402, 404	Hypertensive heart disease with or without renal disease	455	1.5
410-414	Ischemic heart disease	27,500	93.0
424, 428	Chronic disease of endocardium and other myocardial insufficiency	293	1.0
420-423, 425-427, 429	All other forms of heart disease	626	2.1
	Total	29,577	100.0

Of those who died from diseases of the heart, 2.8 percent were 25-44 years old, 25.0 percent were 45-64 years and 72.0 percent were 65 years old and over. More males (55.7 percent) than females (44.3 percent) succumbed to this group of diseases.

Based on estimates for the United States, 38.8 percent of total deaths in 1968 were assigned to heart disease and the estimated mortality rate per 100,000 population was 372.9.

CANCER: Malignant neoplasms continues to appear as the second leading cause of death, contributing 18.8 percent to total deaths.

In 1968 there were 12,897 cancer deaths with a mortality rate of 179.0 per 100,000 population. For the United States as a whole, cancer deaths amounted to 16.6 percent of total deaths and the estimated death rate was 159.6 per 100,000 population.

Male deaths constituted 53.5 percent of the total cancer deaths while females accounted for 46.5 percent. More men than women died from malignant neoplasms of buccal cavity and pharynx, digestive organs and peritoneum, respiratory system, and lymphatic and hematopoietic tissues. Females outnumbered males in deaths from malignant neoplasms of bone, connective tissue, skin and breast and from cancer of genitourinary organs.

As in the case of diseases of the heart and cerebrovascular diseases, cancer deaths are largely concentrated in the upper age groups. In 1968 slightly more than 92 percent occurred in persons 45 years of age and over.

CEREBROVASCULAR DISEASE: In the selected list of leading causes of death, cerebrovascular disease ranked third in order of frequency and accounted for 9.0 percent of total deaths in 1968. There were 6,204 deaths with a rate of 86.1 per 100,000 population. Female deaths (3,426) were higher than male deaths (2,778) by 23 percent. Cerebral hemorrhage (1,359 deaths) and cerebral thrombosis (2,197 deaths) accounted for slightly more than half of the number of deaths assigned to this group cause.

The 1968 estimates for the United States show that 10.9 percent of total deaths were due to cerebrovascular disease and the national rate (estimated) was 104.8 per 100,000 population.

ACCIDENTS: The death toll from accidents was sufficiently high to rank this category as fourth among leading causes. Accidents accounted for 4.3 percent of total deaths and, in 1968, terminated the lives of 2,933 persons. The New Jersey death rate was 40.7 per 100,000 population as compared with the estimated death rate of 55.8 for the United States. The major portion of these deaths was made up of fatalities due to injuries received in motor vehicle accidents (1,341 deaths) and those resulting from accidental falls (695 deaths).

Accidents rank first among leading causes of death in age groups 1-4, 5-14, and 15-24 years. By cause of accident, drowning appeared first in ages 1-4 years while motor vehicle accidents ranked first in age groups 5-14 and 15-24 years.

With increased use of the motorcycle for both transportation and pleasure driving, it is important to note that 27 fatalities occurred in New Jersey as a result of accidents involving motorcycles. Passengers on the motorcycle accounted for 7 deaths while 20 occurred to the operators of the vehicles. Of those who died, one was in the age group 5-14 years, 17 were 15-24 years old, 7 were 25-44 years, and 2 were 45-64 years of age.

SELECTED RESPIRATORY DISEASES: Influenza and pneumonia, combined, were fifth among leading causes and contributed 3.5 percent of the deaths to the total in 1968. There were 2,378 influenza and pneumonia deaths and a mortality rate of 33.0 per 100,000 population. Influenza deaths numbered 144 and pneumonia deaths amounted to 2,234.

New Jersey experienced two major outbreaks of influenza during 1968, one in January and February and the other in December.

Chronic bronchitis, emphysema and asthma added 905 deaths to total deaths. Of the three, emphysema accounted for 643 deaths, chronic bronchitis deaths totalled 189 and asthma deaths numbered 73. For this group of respiratory diseases, the mortality rate was 12.6 per 100,000 population as compared with the estimated rate of 16.6 for the United States.

DIABETES: There were 1,491 deaths from diabetes with a death rate of 20.7 per 100,000 population. New Jersey's rate was above the estimated rate of 19.2 for the nation as a whole.

Diabetes, sixth among leading causes of death, accounted for 2.2 percent of total deaths. It is one of the leading causes of death in the age groups 45-64 years and 65 years and over. Most of the diabetes deaths occurred in the latter age group.

SUICIDE: Deaths by suicide totalled 538 resulting in a death rate of 7.5 per 100,000 population. The estimated death rate was 10.7 for the United States. Over twice as many males as females died as a result of suicide. One death occurred in the 5-14 age group; 48 deaths occurred to persons between the ages of 15-24; and the balance were 25 years of age and over.

HOMICIDE: A total of 369 deaths due to homicide occurred in 1968. The death rate of 5.1 per 100,000 was lower than the estimated rate of 7.1 for the United States. Included in the total were eight deaths of infants less than one year old, nine deaths in the age group 1-4 years and 15 deaths of children 5-14 years of age.

DEATHS FROM OTHER SELECTED CAUSES: Tuberculosis was responsible for 255 deaths and a death rate of 3.5 per 100,000 population. The national rate (estimated) was 3.3 for the same year.

Two deaths were due to whooping cough and both were in children less than one year old. Meningococcal infections accounted for 15 deaths with 11 of these occurring in children under 15 years of age. Ten of the 15 deaths were due to meningococcal meningitis. Two deaths resulted from tetanus and 36 deaths were due to infectious hepatitis. No deaths occurred from acute poliomyelitis, diphtheria, measles, typhoid fever or smallpox.

Note: Rates are per 1,000 live births except the perinatal death rate which represents the number of infant deaths under 7 days plus fetal deaths per thousand live births plus fetal deaths. Perinatal deaths not available prior to 1947. Beginning with 1951, neonatal deaths include only deaths under 28 days of age. As of 1968, only fetuses of 20 or more weeks gestation are included. This affects both the fetal and perinatal deaths and death rates.

Notes: Infant and neonatal death rates are per 1,000 live births. Neonatal deaths include only deaths under 28 days. The perinatal death rate is the number of deaths under 7 days plus fetal deaths per 1,000 deliveries (live births plus fetal deaths combined). Beginning with 1968, fetal deaths included only fetuses of 20 or more weeks gestation. This affects the perinatal deaths and death rates.

3.	Accidental poisoning by drugs and medicaments (E850-E859)	17
4.	Accidental poisoning by gases and vapors (E870-E877)	13
5.	Accidents caused by fires and flames (E890-E899)	12
6.	Accidental falls (E880-E887,E943)	9
	All other accidents	55

TABLE 17: DEATHS DUE TO ACCIDENTS BY CAUSE OF ACCIDENT FOR SELECTED AGE GROUPS
NUMBER AND RANK: 1968 (Continued)

25 - 44 YEARS

RANK ORDER	CAUSE OF DEATH (8th REVISION)	NUMBER
	ALL ACCIDENTAL DEATHS (E800-E949)	564
1.	Motor vehicle accidents (E810-E823,E940)	333
2.	Accidental falls (E880-E887,E943)	48
3.	Accidents caused by fires and flames (E890-E899)	40
4.	Accidental drowning and submersion (E910)	21
5.	Air and space transport accidents (E840-E845)	13
5.	Accidental poisoning by drugs and medicaments (E850-E859)	13
6.	Accidental poisoning by gases and vapors (E870-E877)	12
	All other accidents	84

45 - 64 YEARS

	ALL ACCIDENTAL DEATHS (E800-E949)	626
1.	Motor vehicle accidents (E810-E823,E940)	279
2.	Accidental falls (E880-E887,E943)	128
3.	Accidents caused by fires and flames (E890-E899)	70
4.	Water transport accidents (E830-E838)	14
4.	Inhalation and ingestion of food and other objects causing obstruction or suffocation (E911-E912)	14
5.	Accidental drowning and submersion (E910)	13
6.	Accidental poisoning by gases and vapors (E870-E877)	9
	All other accidents	99

65 YEARS AND OVER

	ALL ACCIDENTAL DEATHS (E800-E949)	848
1.	Accidental falls (E880-E887,E943)	483
2.	Motor vehicle accidents (E810-E823,E940)	251
3.	Accidents caused by fires and flames (E890-E899)	44
4.	Inhalation and ingestion of food and other objects causing obstruction or suffocation (E911-E912)	11
5.	Accidental drowning and submersion (E910)	7
6.	Accident caused by hot substances, corrosive, liquid, and steam (E924)	5
	All other accidents	47
