October 1970

The eighth annual report of the Public Health Statistics Program, New Jersey State Department of Health, presents information related to births, marriages, deaths and fetal deaths which occurred during calendar year 1969.

Additional statistical data are available from unpublished tabulations for municipalities less than 50,000 population.

State Commissioner of Health

## TABLE OF CONTENTS

<u>Table No.</u>		<u>Page No.</u>
	Report of the Public Health Statistics Program, Calendar Year 1969 . . . . .	1
1.	Population Estimates, Births, Marriages (by Occurrence) And Deaths, Numbers And Rates Per 1,000 Population: 1945 - 1969 . . . . .	9
2.	Births By Legitimacy By Counties And Major Cities: 1969 . . . . .	10
3.	Resident Births By Weight Group By Age Group Of Mother: 1969 . . . . .	11
4.	Births, Marriages By Occurrence, Deaths, Infant Deaths And Maternal Deaths By Counties And Major Cities (Numbers and Rates): 1969 . . . . .	12
5.	Marriages In New Jersey By Age Of Husband By Age Of Wife: 1969 . . . . .	13
6.	Births And Infant, Neonatal, Fetal, Perinatal And Maternal Deaths (Numbers and Rates): 1945 - 1969 . . . . .	14
7.	Infant Deaths, Neonatal Deaths And Perinatal Deaths By Counties And Major Cities: 1969 . . . . .	15
	Report On Infant Deaths By Cause: 1969 . . . . .	16
8.	Infant Deaths By Cause And Age: 1969 . . . . .	17
9.	Births, Marriages, Deaths, Fetal Deaths, Infant Deaths And Neonatal Deaths By Counties And Municipalities: 1969 . . . . .	19
10.	Tuberculosis Cases And Deaths By Counties And Major Cities, Numbers And Rates Per 100,000 Estimated Population: 1969 . . . . .	33
11.	Cases Of Syphilis By Stage And Gonorrhoea, Numbers And Rates Per 100,000 Estimated Population (Civilian Cases Only): 1950 - 1969 . . . . .	34
12.	Venereal Disease Cases (Including Military) By Age Groups: 1969 . . . . .	35
13.	Syphilis Cases (Including Military) By Age Groups: 1969 . . . . .	35
14.	Syphilis And Gonorrhoea Cases By Counties And Major Cities, Numbers And Rates Per 100,000 Estimated Population: 1969 . . . . .	36
15.	Resident Deaths From Selected Respiratory Diseases: 1969 . . . . .	37
16.	Principal Causes Of Death By Specified Age Groups: 1969 . . . . .	38
17.	Motor Vehicle Deaths In New Jersey By Cause Of Death By Age: 1969 . . . . .	40
18.	Deaths Due To Accidents By Cause Of Accident For Selected Age Groups, Numbers And Rank: 1969 . . . . .	41

Report of the Public Health Statistics Program  
Calendar Year, 1969

Information presented in this annual report is primarily a summary of statistical data obtained from original records of birth, marriage, death and fetal death. These data are for calendar year 1969 and, except for marriages, are shown by place of residence unless stated otherwise. Marriages are assigned to the places in which the ceremonies were performed.

Births, deaths and fetal deaths, which occurred in out-of-state jurisdictions to residents of New Jersey, were included in resident totals.

POPULATION ESTIMATES: The July 1, 1969 population estimates used to compute rates were those prepared by the Bureau of Research and Statistics, Department of Conservation and Economic Development. According to these estimates, New Jersey continued to gain in population as it has since 1960, though at a slower pace. As of July 1, 1969 the population of New Jersey was estimated to be 7,283,440 or 1.1 percent higher than in 1968.

Most (61.9 percent) of the gain in population was derived from natural increase (births minus deaths). The remainder (38.1 percent) was as a result of migration. Thus, in 1969, natural increase amounted to 49,462 persons while net migration accounted for 30,468 individuals.

VITAL EVENTS IN NEW JERSEY: A comparison of 1969 and 1968 vital events which occurred in New Jersey shows a reduction in the number of deaths and a rise in births and marriages in 1969. Monthly occurrence figures for each of the events follow.

Vital Events Occurring in New Jersey  
By Month of Occurrence: 1969

<u>Month</u>	<u>Births</u>	<u>Marriages</u>	<u>Deaths</u>
Total	113,840	55,692	66,471
January	9,224	2,924	6,195
February	8,573	3,094	5,286
March	9,485	3,404	5,748
April	9,037	3,839	5,247
May	9,325	4,965	5,425
June	9,266	7,181	5,195
July	10,212	4,552	5,379
August	10,177	6,765	5,403
September	9,561	5,253	5,104
October	9,825	4,607	5,625
November	9,241	5,059	5,654
December	9,914	4,049	6,210

BIRTHS IN NEW JERSEY: Of the 113,840 live infants born in New Jersey, 99.6 percent were delivered in hospitals. Physicians attended most (99.8 percent) of the births. Midwives delivered three babies.

There were 58,114 (51 percent) males and 55,726 (49 percent) females born in 1969. The sex ratio of 104 males to 100 females remains the same as in the preceding year. Babies born as twins numbered 2,262 and 49 infants were born as triplets. The remainder (111,529) were single births.

More births occurred outside of New Jersey to residents of this State than occurred in New Jersey to residents of other states. There were 1,409 nonresidents born in New Jersey while 4,801 births to residents occurred out-of-state.

RESIDENT BIRTHS: A reversal in the downward trend of births and birth rate occurred in 1969. Birth data show that there were 117,232 resident live births or 2.7 percent more than in 1968 when births numbered 114,101. The birth rate, higher by 1.9 percent, amounted to 16.1 per 100,000 estimated population as compared with a rate of 15.8 in 1968. The provisional birth rate for the Nation as a whole was 17.7, about two percent higher than the final 1968 rate of 17.5 per 1,000 population.

Of the babies born in 1969, 46 percent were to mothers less than 25 years of age. As recently as 1960, this age group accounted for 38.7 percent of the live births. This reflects both the trend towards earlier marriages and child bearing at younger ages. Although the percent of mothers 25-29 years of age dropped from 28.9 in 1960 to 27.2 in 1966, a reversal in trend occurred in 1967 so that this age group accounted for 31.2 percent of all live births by 1969. Women 35 years and over bore 8.3 percent of the children in contrast with 9.4 percent in 1968.

There were 94,790 (80.9 percent) white infants and 20,587 (17.6 percent) nonwhite babies born. Information as to race was unstated on 1,855 births records or 1.6 percent.

BIRTHS TO UNWED MOTHERS: There were 11,120 children born out-of-wedlock in 1969, resulting in a numerical increase of 12.4 percent over the 1968 total of 9,889 illegitimate births. Based on 1,000 live births, the illegitimacy ratio of 94.9 in 1969 surpassed the previous year's high of 86.7 by 9.5 percent.

There were 3,931 white and 7,151 nonwhite children born to unwed mothers. Race was unstated on an additional 38 records. Almost 48 percent of the illegitimate births occurred to mothers less than 20 years of age. School children under 15 years of age were responsible for 236 illegitimate births and 23 legitimate births, most of which were conceived out-of-wedlock. In the age category 15-19 years, 5,081 infants of the 14,038 babies were born out-of-wedlock. Of the legitimate first births born to married women 15-19 years of age, a sizeable number will have been conceived before the marriage took place. Resident births by legitimacy status by age group of mother are shown in the following table.

Live Births by Legitimacy Status by Age of Mother: 1969

Age of Mother	Total Births		Legitimate		Illegitimate	
	Number	Percent	Number	Percent	Number	Percent
All Ages	117,232	100.0	106,112	100.0	11,120	100.0
10 - 14	259	0.2	23	< 0.1	236	2.1
15 - 19	14,038	12.0	8,957	8.4	5,081	45.7
20 - 24	39,657	33.8	35,952	33.9	3,705	33.3
25 - 29	36,617	31.2	35,342	33.3	1,275	11.4
30 - 34	16,865	14.4	16,380	15.4	485	4.4
35 - 39	7,628	6.5	7,370	6.9	258	2.3
40 - 44	2,062	1.8	1,988	1.9	74	0.7
45 - 49	97	0.1	93	0.1	4	< 0.1
Unknown	9	< 0.1	7	< 0.1	2	< 0.1

RESIDENT BIRTHS BY BIRTH WEIGHT: Although most birth records show the weight of the infant at the time of birth, this information was omitted on 2,080 birth records in 1969. This was more than three and a half times as many as in the preceding year.

Many New Jersey residents use New York City hospital facilities for deliveries, and a sizeable number of copies of birth records sent by the New York City Health Department omitted information on birth weight. Due to a shortage of personnel, birth weight and other information were not transferred from the confidential portion of the birth record to the copy sent to New Jersey by New York City.

Based on 115,152 births for which birth weight was stated, 9,475 infants or 8.2 percent of the total were classified as premature by birth weight (i.e. those weighing 5 pounds 8 ounces or less). Included in this weight group were 1,642 babies born to unwed mothers. Overweight babies (those weighing 9 pounds 15 ounces or more) numbered 1,324 or 1.1 percent of the total for which birth weight was known.

Births by weight group are shown in the following table.

Resident Births by Weight Group  
Total and Illegitimate Births

<u>Weight Group</u>	<u>Total Resident Births</u>		<u>Illegitimate Births</u>	
	<u>Number</u>	<u>Percent</u>	<u>Number</u>	<u>Percent</u>
5001 grams or more	146	0.1	8	0.1
4501-5000 grams	1,178	1.0	39	0.3
4001-4500 grams	7,283	6.3	328	3.0
3501-4000 grams	28,381	24.7	1,816	16.4
3001-3500 grams	45,374	39.4	4,321	39.1
2501-3000 grams	23,315	20.3	2,904	26.3
2001-2500 grams	6,246	5.4	996	9.0
1501-2000 grams	1,810	1.6	331	3.0
1001-1500 grams	746	0.6	150	1.3
1000 grams or less	673	0.6	165	1.5
Total with weight given	115,152	100.0	11,058	100.0

MARRIAGES: More marriages took place in New Jersey in 1969 than occurred in 1968. A total of 55,692 marriages were performed, exceeding the previous year's number of 53,857 marriages by 3.4 percent. Marriage rates amounted to 7.6 per 1,000 population in 1969 and 7.5 for 1968. The trend in marriages since 1959 has been upward and marriage rates during this period ranged between 6.5 and 7.6 (1969). New Jersey's rate for 1969 is below the provisional 1969 marriage rate of 10.6 for the United States.

Peak months for weddings were June, August and September in that rank order and, combined, they accounted for better than a third of all marriages. Of the total number of marriages, 12.9 percent occurred in June, 12.1 percent in August and 9.4 percent in September. Fewest marriages were performed in January (5.2 percent) and February (5.6 percent).

First marriages accounted for 83.1 percent of total persons married. Previously married persons, whose unions were dissolved either by death or divorce, represented 16.9 percent of total persons married. The number of brides and grooms married, according to their previous marital status, follows.

Marriages in New Jersey by Previous Marital Status: 1969

Marital Status	Total	Brides	Grooms
Single	92,567	46,602	45,965
Widowed	5,713	2,877	2,836
Divorced	13,104	6,213	6,891
Total Married	111,384	55,692	55,692

Almost one-half of the brides and grooms married at ages 20-24 years. Females tend to marry at earlier ages than males. Teenage brides accounted for 22.8 percent of females married while grooms 15-19 years old represented 7.8 percent of all males married. Teenagers who married in 1969 numbered 17,101 and exceeded the 1968 total of 16,628 by 2.8 percent.

DEATHS: Fewer deaths occurred to New Jersey residents and the total of 67,770 deaths with a rate of 9.3 per 1,000 population was below the 1968 total of 68,574 deaths and a death rate of 9.5. The provisional national death rate for 1969 was 9.5 per 1,000 population.

There were 2,320 deaths in New Jersey of nonresidents and 3,619 deaths of New Jersey residents in states outside of New Jersey.

INFANT DEATHS: In 1969, infant deaths and death rate were lower than in 1968. Infant deaths numbered 2,369 and yielded an infant mortality rate of 20.2 per 1,000 live births. Comparable figures for 1968 were 2,469 infant deaths with an infant death rate of 21.6. The State infant death rate was below the 1969 provisional rate of 20.7 for the United States.

Neonatal deaths, or deaths of infants less than 28 days old, amounted to 1,796 and the neonatal mortality rate was 15.3 per 1,000 live births. The 1969 neonatal deaths and rate represent new lows for New Jersey since, a year earlier, deaths under 28 days totalled 1,915 and the neonatal death rate was 16.8.

Perinatal deaths, which are a combination of deaths of infants less than seven days old and fetal deaths, dropped from 3,330 deaths in 1968 to 3,181 deaths. The 1969 perinatal mortality rate declined from 28.8 in 1968 to 26.8 per 1,000 total deliveries (live births plus fetal deaths).

MATERNAL DEATHS: A slight numerical increase in deaths related to pregnancy, childbirth and the puerperium occurred in 1969 when the total rose from 32 in 1968 to 34 deaths. The maternal mortality rate, per 1,000 live births, remained at 0.3. Ten of these deaths occurred to women in the age group 15-24 and 24 more occurred between the ages 25-44.

FETAL DEATHS: In 1969, fetal deaths totalled 1,545 as compared with 1,584 fetal deaths a year earlier. The fetal death rate dropped from 13.9 in 1968 to 13.2 per 1,000 live births in 1969.

LEADING CAUSES OF DEATH: The rank order of the first six principal causes of death remained the same as in 1968. The number of deaths and the percent each represents of total deaths follows. Combined, these account for slightly more than 81 percent of total deaths.

<u>Rank</u>	<u>Causes</u>	<u>Deaths</u>	<u>Percent</u>
1	Diseases of heart	29,709	43.8
2	Malignant neoplasms	12,941	19.1
3	Cerebrovascular disease	5,942	8.8
4	Accidents	3,000	4.4
5	Influenza and pneumonia	2,125	3.1
6	Diabetes mellitus	1,499	2.2

DISEASES OF THE HEART: Of the 37,579 deaths assigned to major cardiovascular diseases, by far the greatest number were due to diseases of the heart, the first among principal causes of mortality. In 1969, there were 29,709 deaths from diseases of the heart and a mortality rate of 407.9 per 100,000 estimated population. Although heart disease deaths were above the 29,577 deaths which occurred in 1968, the heart disease death rate in 1968 dropped from 410.6 to 407.9 in 1969.

The subgroups of the diseases of the heart follow for 1969 with the number of deaths and percent of total for each subgroup.

<u>8th Revision Intern'l. List No.</u>	<u>Description</u>	<u>Number</u>	<u>% of Total</u>
390-398	Active rheumatic fever and chronic rheumatic heart disease	667	2.2
402,404	Hypertensive heart disease with or without renal disease	404	1.4
410-414	Ischemic heart disease	27,733	93.3
424,428	Chronic disease of endocardium and other myocardial insufficiency	299	1.0
420-423, 425-427,429	All other forms of heart disease	606	2.0
	Total	29,709	99.9

Among principal causes, heart disease ranks first in age groups 25-44 years, 45-64 years and 65 years and over. In 1969, 45.1 percent of heart disease deaths occurred to females and 54.9 percent to males.

CANCER: As in the case of diseases of heart, a slight rise in deaths due to malignant neoplasms occurred in 1969 while the death rate was lower. Cancer deaths increased from 12,897 in 1968 to 12,941 in 1969 and the mortality rate declined from 179.0 per 100,000 estimated population to 177.7 in 1969. It appeared as one of the leading causes of death in every age group, taking the greatest toll from those 45 years of age and older. More males (53.1 percent) died from cancer than females (46.9 percent).

Distribution of 1969 deaths due to malignant neoplasms follows by primary site of cancer. The death rates, presented for both 1968 and 1969, show a slight improvement in all but two primary sites of cancer in 1969. Slightly higher death rates occurred for malignant neoplasms of genitourinary organs and for neoplasms of lymphatic and hematopoietic tissue.

Deaths Due to Malignant Neoplasms by Primary Site  
Number and Rate per 100,000 Population

8th Revision Intern'l. List #	Primary Site	1969		1968
		Deaths	Rate	Rate
140 - 209	All Anatomical Sites	12,941	177.7	179.0
140 - 149	Buccal Cavity and pharynx	288	4.0	4.1
150 - 159	Digestive organs and peritoneum	4,085	56.1	57.5
160 - 163	Respiratory system	2,667	36.6	37.2
170 - 174	Bone, connective tissue, skin and breast	1,607	22.1	22.4
180 - 189	Genitourinary organs	2,177	29.9	29.3
190 - 199	Other and unspecified sites	956	13.1	13.5
200 - 209	Lymphatic and hemato- poietic tissue	1,161	15.9	15.1

CEREBROVASCULAR DISEASE: Accounting for 8.8 percent of all deaths, cerebrovascular disease deaths dropped from 6,204 in 1968 to 5,942 deaths in 1969. A decline of 5.2 percent in the mortality rate also occurred, since the death rate of 81.6 per 100,000 population was lower than the 1968 rate of 86.1.

Cerebrovascular disease ranked third among leading causes of death for all ages as well as in the age groups 45-64 and 65 years and over, both age groups accounting for most of the fatalities in this cause group.

Female deaths (3,322) exceeded male deaths (2,620) by almost 27 percent. Cerebral hemorrhage (1,270 deaths) and cerebral thrombosis (2,036 deaths) were responsible for more than 56 percent of all deaths due to cerebrovascular disease.

ACCIDENTS: Deaths resulting from accidents were higher and totalled 3,000 in 1969 as against 2,933 in the preceding year. The fatality rate for accidents also rose from 40.7 per 100,000 in 1968 to 41.2 in 1969. All accidents represent 4.4 percent of total deaths and continue fourth among leading causes of death.

The greatest number of accidental deaths occurred as a result of injuries due to motor vehicle accidents. Such fatalities amounted to 1,304 and were slightly below the 1,341 deaths occurring in 1968. The death rate of 17.9 per 100,000 population in 1969 was below that of 18.6 in the previous year. Accidental deaths by cause of accident show motor vehicle accidents as the principal cause of fatalities in each age group starting with 1-4 years. The exception was the age group 65 years and over where motor vehicle accidents appeared second to accidental falls. More males (944) than females (360) died as a result of injuries received in motor vehicle accidents.

Injuries due to accidental falls terminated the lives of 702 persons in 1969 as compared with 695 in 1968. The loss of lives was greatest in the older age groups (109 deaths in ages 45-64 and 500 deaths in 65 years and older).

In New Jersey, there were 31 accidental deaths involving motorcycles. One death occurred to a passenger on the motorcycle while 30 occurred to operators of the vehicle. This compares with 27 fatalities (20 operators and 7 passengers) in 1968. Twenty-four of the 31 persons who died in 1969 were in the age group 15-24 years, 6 were 25-44 years old and one was in the age group 45-64.

SELECTED RESPIRATORY DISEASES: As a group, influenza and pneumonia continued in fifth place among leading causes of death. Influenza and pneumonia deaths declined from 2,378 in 1968 to 2,125 deaths in 1969, and the mortality rate of 29.2 per 100,000 population was below the 1968 death rate of 33.0. Pneumonia deaths totalled 2,065 in 1969 as compared with 2,234 deaths a year earlier. Influenza deaths, in 1969, dropped to 60 deaths from the preceding year's high of 144 deaths. The second outbreak of influenza in 1968, which occurred in December, carried over to January and February, 1969, when most of the 60 deaths occurred.

Chronic bronchitis, emphysema and asthma deaths increased by 5.7 percent in 1969. This group of diseases accounted for 957 deaths and a rate of 13.1 per 100,000 population. Comparable figures for 1968 were 905 deaths with a rate of 12.6. While fewer deaths from asthma occurred in 1969, chronic bronchitis and emphysema deaths were higher. Asthma deaths dropped from 73 in 1968 to 48 in 1969. Chronic bronchitis deaths increased from 189 to 219 deaths in 1969. The heaviest toll was among victims of emphysema with 690 deaths in 1969 as against 643 in 1968.

DIABETES: Among leading causes of death, diabetes remained sixth in order of frequency and its share of total deaths was the same as in 1968, 2.2 percent.

No significant change occurred in diabetes mortality. Diabetes deaths amounted to 1,499, yielding a mortality rate of 20.6 per 100,000 population. This compares with 1,491 deaths and a death rate of 20.7 in 1968. More females (924) died than males (575) and most of the victims of diabetes were 65 years of age or over.

SUICIDE: The lives of 591 persons were terminated by suicide in 1969 as compared with 538 deaths by this means in 1968. Death rates from suicide were 8.1 per 100,000 population in 1969 and 7.5 a year earlier.

Ranking tenth among leading causes of death, suicide also appears fourth in order of frequency of deaths in the age group 15-24 years and fifth in the age group 25-44 years. There were six suicides among school children less than 15 years old, 63 in those 15-24 years old, 205 in the age group 25-44 years, and the remainder in those 45 years of age and older. Males accounted for 69 percent of all deaths from suicide.

Self-inflicted injury by firearms and explosives was the most common method of committing suicide and 172 such deaths resulted in 1969. Suicide by hanging, strangulation and suffocation was second with 140 deaths.

HOMICIDE: Deaths due to homicide rose from 369 and a rate of 5.1 per 100,000 population in 1968 to 388 deaths and a rate of 5.3 in 1969. Of the total, 6 infants under one year of age, 7 children between ages 1-4 years, and 14 children in the age group 5-14 years died by this means. The largest number were committed by firearms and explosives (190 deaths) and by cutting and piercing instruments (114 deaths).

DEATHS FROM OTHER SELECTED CAUSES: A decline of 17.1 percent in the tuberculosis mortality rate occurred in 1969. The rate of 2.9 per 100,000 population was below the 1968 tuberculosis death rate of 3.5. Deaths from tuberculosis, lower by 16.1 percent, totalled 214 in 1969 and 255 in the previous year.

In 1969, there were three deaths due to salmonellosis, one death from bacillary dysentery, seven from amebiasis, 15 from meningococcal infections, three from aseptic meningitis, one from tetanus, one from measles, 11 from encephalitis, 46 from infectious hepatitis and one from mumps. No deaths were due to typhoid fever, whooping cough, diphtheria, and smallpox.

1969	117,232	2,369	20.2	1,796	15.3	1,545	13.2	34	0.3		

Note: Rates are per 1,000 live births except the perinatal death rate which represents the number of infant deaths under 7 days plus fetal deaths per thousand live births plus fetal deaths. Perinatal deaths not available prior to 1947. Beginning with 1951, neonatal deaths include only deaths under 28 days of age.

Note: Infant and neonatal death rates are per 1,000 live births. Neonatal deaths include only deaths under 28 days. The perinatal death rate is the number of deaths under 7 days plus fetal deaths per 1,000 deliveries (live births plus fetal deaths combined).

Report on Infant Deaths by Cause: 1969

Infant mortality rates continued downward in 1969, having dropped from 21.6 per 1,000 live births in 1968 to 20.2 in the following year. Deaths of infants under one year of age numbered 2,369 or 100 fewer than in 1968. Infant deaths comprised 3.5 percent of total deaths in 1969.

Marked decline in infant mortality rates occurred in the 1930's through 1950 when the rate was approximately one-half (25.0) of the infant mortality rate in 1932. From 1951 and through the mid 1960's, the infant mortality rates ranged between 23.3 and 24.5 per 1,000 live births. In 1966, the rate (22.4) dropped below the previous low of 23.3. In 1968 the infant death rate was 21.6 and, by 1969, the reduction of 6.5 percent in the infant mortality rate was achieved when the new low of 20.2 was recorded. The provisional infant mortality rate for the United States was 20.7.

The greatest number of infant deaths occur within the first day of life and, in 1969, there were 1,114 deaths (47 percent) in this category. An additional 522 babies (22 percent) lived from one to six days while 160 more survived from 7 through 27 days. Thus, almost 76 percent of the 2,369 died during the neonatal period.

Deaths of infants under one year were primarily due to three principal causes: certain causes of mortality in early infancy (1,412 deaths), congenital anomalies (389 deaths), and influenza and pneumonia (247 deaths). Combined, these three cause-of-death groups accounted for slightly more than 86 percent of all infant deaths.

The general category designated as "certain causes of mortality in early infancy" includes maternal conditions such as difficult labor of various origins with birth injuries identified, maternal toxemias, and diseases specific for the newborn. Certain causes of mortality in early infancy, as a whole, ranked seventh among the twelve leading causes of death in 1969. This overall cause group takes most of its toll from infants less than a week old and, in 1969, all but 58 of the 1,412 deaths occurred within the first six days of life.

Infant deaths due to maternal conditions unrelated to pregnancy numbered 23. Among these were syphilis, 1 death; diabetes mellitus, 13 deaths; and rubella, 4 deaths.

Selected principal causes of death of infants during the neonatal period and for all infants less than one year of age appear in the following table. Death rates, expressed per 1,000 live births, are shown also.

Selected Principal Causes of Death of Infants  
Under One Year and Under 28 Days of Age  
Number and Rates per 1,000 Live Births

Cause of Death	Under 1 year		Under 28 days
