JAMES R. COWAN, M.D.

STATE COMMISSIONER OF HEALTH

November, 1971

New Jersey Health Statistics, 1970 represents the ninth annual report of the Public Health Statistics Program. It is issued in conformity with N.J.S.A. 26:1A-37a. which states that the Department shall: "Collect, preserve and tabulate all information required by law in reference to births, marriages, deaths and all vital facts and shall obtain, collect and preserve such information relating to the health of the people of the State...."

For the first time in this series of reports, tabulations for major cities include municipalities which had a population of 45,000 or more at the time of the April 1, 1970 Federal Census.

James R. Cowan, M.D.  
State Commissioner of Health

## TABLE OF CONTENTS

<u>Table No.</u>		<u>Page No.</u>
	Report of the Public Health Statistics Program, Calendar Year, 1970 . . . . .	1
1.	Population Estimates, Births, Marriages (by Occurrence) And Deaths, Numbers And Rates Per 1,000 Population: 1946 - 1970 . . . . .	9
2.	Births By Legitimacy By Counties And Major Cities: 1970 . . . . .	10
3.	Resident Births By Weight Group By Age Group Of Mother: 1970. . . . .	11
4.	Births, Marriages By Occurrence, Deaths, Infant Deaths And Maternal Deaths By Counties And Major Cities (Numbers and Rates): 1970 . . . . .	12
	Marriages In New Jersey: 1970 . . . . .	13
5.	Marriages In New Jersey By Age Of Husband By Age Of Wife: 1970 . . . . .	15
6.	Births And Infant, Neonatal, Fetal, Perinatal And Maternal Deaths (Numbers And Rates): 1946 - 1970 . . . . .	16
7.	Infant Deaths, Neonatal Deaths And Perinatal Deaths By Counties And Major Cities: 1970. . . . .	17
8.	Infant Deaths By Cause And Age: 1970 . . . . .	18
9.	Births, Marriages, Deaths, Fetal Deaths, Infant Deaths And Neonatal Deaths By Counties And Municipalities: 1970 . . . . .	20
10.	Tuberculosis Cases And Deaths By Counties And Major Cities, Numbers And Rates Per 100,000 Estimated Population: 1970 . . . . .	34
11.	Cases Of Syphilis By Stage And Gonorrhoea, Numbers And Rates Per 100,000 Estimated Population (Civilian Cases Only): 1951 - 1970 . . . . .	35
12.	Venereal Disease Cases (Including Military) By Age Groups, Numbers And Rates Per 100,000 Estimated Population: 1970 . . . . .	36
13.	Syphilis Cases(Including Military) By Age Groups, Numbers And Rates Per 100,000 Estimated Population: 1970 . . . . .	36
14.	Syphilis And Gonorrhoea Cases By Counties And Major Cities , Numbers And Rates Per 100,000 Estimated Population: 1970 . . . . .	37
15.	Resident Deaths From Selected Respiratory Diseases By Sex And Age Groups: 1970 . . . . .	38
16.	Principal Causes Of Death By Specified Age Groups: 1970 . . . . .	39
17.	Motor Vehicle Deaths In New Jersey By Cause Of Death By Age: 1970 . . . . .	41
18.	Deaths Due To Accidents By Cause Of Accident For Selected Age Groups, Numbers And Rank: 1970. . . . .	42

19.	Deaths From All Accidents, Cancer, Diabetes, Heart Diseases, And Cerebrovascular Diseases By Counties And Major Cities (Numbers And Rates per 100,000 Population): 1970 . . . . .	44
20.	Deaths And Death Rates Per 100,000 Population For Diseases Of The Circulatory System By Cause Group By Age And Sex: 1970 . . . . .	45
21.	Deaths And Death Rates Per 100,000 Population For Neoplasms By Cause Group By Age And Sex: 1970 . . . . .	46
22.	Deaths By Cause By Sex And Age Groups, New Jersey 1970 . . . . .	47
23.	Deaths By Cause Groups By Sex And Age Groups, Total New Jersey: 1970 . . . . .	65
24.	Male Deaths By Cause Groups And Age Groups, New Jersey: 1970 . . . . .	66
25.	Female Deaths By Cause Groups And Age Groups, New Jersey: 1970 . . . . .	67

Report of the Public Health Statistics Program  
Calendar Year, 1970

**INTRODUCTION:** This statistical summary, for calendar year 1970, is primarily based on birth, marriage and death records maintained by the Vital Statistics Registration Program. Included are data from cases reported of tuberculosis, collected by the Tuberculosis Control Program, and venereal diseases reported to the Venereal Disease Control Program. Except where indicated otherwise, all statistics are by place of residence.

Population counts for April 1, 1970 were those of the Bureau of the Census while midyear estimates for July 1, 1970 were computed by the Office of Business Economics, Department of Labor and Industry.

**POPULATION:** As of April 1, 1970, the Federal Census count for New Jersey was 7,168,164 as compared with 6,066,782 on April 1, 1960, a rise of 18.2 percent. During the decade, excess of births over deaths (natural increase) amounted to 592,881 (53.8 percent) and in-migration added 508,501 (46.2 percent) or a total of 1,101,382 persons.

Population density per square mile of land area in 1970 amounted to 957.0 persons. Nine of New Jersey's counties - Hudson, Essex, Bergen, Union, Passaic, Camden, Middlesex, Mercer and Monmouth - were well over the State average while the remaining counties were lower.

While 40.6 percent of New Jersey's population were less than 25 years old in 1960, 43.4 percent were in this age category in 1970. In 1960, 28.3 percent were 25-44 years old as compared with 24.4 percent in 1970. Those 45 years and over were 31.1 percent of total population in 1960 and 32.2 percent in 1970. The following table presents the April 1, 1970 Federal Census counts by age with percent of total for each age group. In addition, the July 1, 1970 population estimates by age are included and were based on the percents represented by each age group in the Federal Census as of April 1, 1970.

Population (Number and Percent) By Age Groups  
April 1, 1970 and July 1, 1970

Age Group	April 1, 1970		July 1, 1970
	Census Count	% of Total	Estimate
All Ages	7,168,164	100.0	7,194,455
Under 5	589,226	8.2	589,945
5 - 9	692,648	9.7	697,862
10 - 14	710,409	9.9	712,251
15 - 19	611,831	8.5	611,529
20 - 24	509,198	7.1	510,806
25 - 44	1,746,060	24.4	1,755,447
45 - 64	1,611,803	22.5	1,618,752
65+	696,989	9.7	697,863

VITAL EVENTS IN NEW JERSEY: More births, marriages and deaths took place in New Jersey during 1970 than in 1969. Deliveries of live births in New Jersey were up by 2.8 percent; marriages rose by 1.7 percent; and deaths which occurred in the State were 0.6 percent higher than in 1969. These events, by month of occurrence, follow.

Vital Events Occurring In New Jersey  
By Month of Occurrence: 1970

<u>Month</u>	<u>Births</u>	<u>Marriages</u>	<u>Deaths</u>
Total	117,019	56,625	66,848
January	9,581	3,227	6,632
February	8,944	3,317	5,329
March	9,869	3,139	5,523
April	9,275	4,295	5,375
May	9,257	5,237	5,469
June	9,443	7,448	5,286
July	10,330	4,706	5,585
August	10,387	6,721	5,429
September	10,391	5,248	5,134
October	9,756	4,993	5,709
November	9,560	4,472	5,665
December	10,226	3,822	5,712

BIRTHS IN NEW JERSEY: Hospital deliveries amounted to 99.7 percent of the 117,019 births which occurred in New Jersey. Only 391 infants were not born in a hospital and, of these, 212 infants were attended by a physician. One infant was delivered by a midwife, and 178 babies were delivered by other persons (ambulance driver, policeman, etc.)

There were 59,784 (51 percent) males and 57,235 (49 percent) females born in the State in 1970. The sex ratio of 104 males to 100 females remains unchanged from 1969. Single births numbered 114,664; twin babies totalled 2,313; and infants born as triplets amounted to 42.

A total of 4,663 residents were born in out-of-state jurisdictions while 1,514 nonresidents were born in New Jersey.

RESIDENT BIRTHS: In 1970, there were 120,168 resident live births as against 117,232 births in the preceding year. Although this reflects a 2.5 percent gain over 1969, the percent increase is at a slower rate than experienced in the latter year. The numerical rise in 1969 over 1968 amounted to 2.7 percent.

The crude birth rate per 1,000 estimated population was 16.7 in 1970 as compared with 16.5 in 1969. The birth rate for the United States, based on provisional counts of births, was 18.2 births per 1,000 population.

New Jersey's fertility rate was 7.3 percent below that for the nation as a whole. In 1970 the fertility rate for New Jersey was 81.2 births per 1,000 females aged 15-44 years as compared with the fertility rate of 87.6 births for the United States.

Age distribution of mothers shows that 12.8 percent or 15,326 live births occurred to women under age 20. An additional 34.4 percent were born to mothers 20-24 years of age. Thus, women less than 25 years old accounted for 47.2 percent of the total live births in 1970 as compared with 46.0 percent in 1969. Inasmuch as marriages of persons under 25 years of age continue to increase (accounting for approximately 65 percent of persons married in 1969 and 1970), births to mothers less than 25 years old continue to be higher. Women between the ages of 25-29 years were responsible for 31.3 percent of the births, about the same as in 1969. In both 1969 and 1970, an additional 14 percent of the births were to mothers 30-34 years of age. Females 35 years or older bore 7.6 percent of the infants in 1970 as contrasted with 8.3 percent in the preceding year.

There were 96,352 (81.2 percent) white babies and 22,260 (18.5 percent) non-white infants born. A total of 1,556 birth records had no information as to race.

BIRTHS TO UNWED MOTHERS: Illegitimate births represented 10.9 percent of resident births in 1970. Higher by 17.8 percent, births to unwed mothers numbered 13,098 as compared with 11,120 illegitimate births in 1969. The illegitimacy ratio of 109.0 per 1,000 live births was 14.9 percent above the previous year's high of 94.9.

Of the 96,352 white babies born in 1970, 4,469 or 4.6 percent were to unwed mothers. Nonwhite infants numbered 22,260 and 8,591 or 38.6 percent were out of wedlock.

Females less than 20 years old bore 46.1 percent (6,043 infants) of the 13,098 illegitimate babies. An additional 33.4 percent or 4,380 infants in this category were born out of wedlock by women 20-24 years of age. Births by age of mother and by legitimacy status appear in the following table.

Live Births by Legitimacy Status by Age of Mother  
(Number and Percent)

Age of Mother	Total Births		Legitimate		Illegitimate	
	Number	Percent	Number	Percent	Number	Percent
All Ages	120,168	100.0	107,070	100.0	13,098	100.0
10 - 14	295	0.2	24	< 0.1	271	2.1
15 - 19	15,031	12.5	9,259	8.6	5,772	44.1
20 - 24	41,386	34.4	37,006	34.6	4,380	33.4
25 - 29	37,576	31.3	36,007	33.6	1,569	12.0
30 - 34	16,767	14.0	16,073	15.0	694	5.3
35 - 39	7,137	5.9	6,827	6.4	310	2.4
40 - 44	1,864	1.6	1,764	1.6	100	0.7
45 - 49	110	0.1	108	0.1	2	< 0.1
Unknown	2	< 0.1	2	< 0.1		

RESIDENT BIRTHS BY BIRTH WEIGHT: Information as to weight at time of birth appeared on 118,379 birth records and was omitted on 1,789 records. Of those with weight stated, 8.2 percent or 9,747 babies weighed 2,500 grams or less (i.e. 5 pounds 8 ounces or less). Classified as premature births on basis of weight alone, this total included 6,533 white and 3,211 nonwhite babies. Race was unstated for three infants. Overweight babies (i.e. those weighing 9 pounds 15 ounces or more) numbered 1,434 and represented 1.2 percent of the births with weight stated.

DEATHS: There were 67,976 resident deaths and a death rate of 9.4 per 1,000 population in 1970. Comparative figures for 1969 were 67,770 deaths and a rate of 9.5. The slight decrease of 1.1 percent in the mortality rate in 1970 approximates that for the nation. The provisional 1970 death rate for the United States was 9.4 per 1,000 population as compared with 9.5 in the year preceding.

Out-of-state residents who died in New Jersey totalled 2,362 persons. On the other hand, there were 3,488 New Jersey residents who died outside of this State.

INFANT DEATHS: A decrease of 1.0 percent in the infant mortality rate occurred when the death rate dropped from 20.2 per 1,000 live births in 1969 to 20.0 in 1970. Deaths under one year amounted to 2,406 in 1970 as compared with a lower total of 2,369 in 1969. Although the infant death rate of 20.0 is a new low for New Jersey, it is above the national average. The provisional 1970 infant mortality rate was 19.8 per 1,000 live births for the United States, having dropped from a rate of 20.7 in 1969.

Neonatal deaths constituted approximately 80 percent of the deaths under one year. There were 1,915 neonatal deaths (deaths of infants less than 28 days old) in 1970 and the neonatal death rate was 15.9 per 1,000 live births. Comparable figures for 1969 were 1,796 deaths and a rate of 15.3. The provisional neonatal mortality rate in 1970 for the United States was 14.9 per 1,000 live births. Most of the neonatal deaths were of infants who failed to survive the first day of life. Thus, 1,143 (47.5 percent) infants died within the first day and 772 (32.1 percent) died between the ages of 1 day and 27 days.

Perinatal deaths (i.e. deaths of infants less than 7 days old combined with fetal deaths) increased by 8.3 percent, from 3,181 deaths in 1969 to 3,445 in 1970. The perinatal mortality rate rose from 26.8 in 1969 to 28.3 per 1,000 total deliveries in 1970.

In the main, deaths of infants less than a year old were attributed to three groups of causes: certain causes of mortality in early infancy (1,522 deaths), congenital anomalies (383 deaths), and pneumonia (212 deaths). (There were no influenza deaths in this age group in 1970.) These three categories, combined, accounted for 88 percent of all infant mortality and attacked, primarily, babies less than a week old.

Selected principal causes of death of infants who lived less than 28 days and for all infants who did not survive the first year of life appear in the following table. Infant death rates are expressed per 1,000 live births.

Selected Principal Causes of Death of Infants Under One Year  
And Under 28 Days of Age, Number and Rate per 1,000 Live Births

Cause of Death	Under 1 Year		Under 28 Days	
	Number	Rate	Number	Rate
Asphyxia of newborn, unspecified	382	3.2	376	3.1
Immaturity, unqualified	323	2.7	323	2.7
Respiratory distress syndrome	179	1.5	176	1.5
Hyaline membrane disease	130	1.1	130	1.1
Congenital anomalies	383	3.2	264	2.2
Influenza and pneumonia	212	1.8	56	0.5
Accidents	69	0.6	7	< 0.1

**MATERNAL DEATHS:** During 1970 there were 38 deaths due to pregnancy, childbirth and puerperium, four more than in the preceding year. For the third consecutive year, the maternal death rate remained at 0.3 per 1,000 live births. Since 1956 the maternal mortality rate ranged between 0.3 and 0.4. The nation's rate was 0.2.

**FETAL DEATHS:** There were 1,698 fetal deaths in 1970 as compared with a lower figure of 1,545 in 1969. The fetal death rate was higher by 6.8 percent, having risen from 13.2 per 1,000 live births in 1969 to 14.1 in 1970.

**LEADING CAUSES OF DEATH:** The following seven leading causes of death, as a group, were responsible for 83.6 percent of all deaths. There was no change from the previous year in the rank order of the first five causes. Certain causes of mortality in early infancy and diabetes exchanged positions and became sixth and seventh, accordingly. The number of deaths and the percent that each represents of the total follow.

Rank	Causes	Deaths	Percent of Total
	Total Deaths	67,976	100.0
1	Diseases of heart	29,351	43.2
2	Malignant neoplasms	13,242	19.5
3	Cerebrovascular disease	6,290	9.3
4	Accidents	2,982	4.4
5	Influenza and pneumonia	1,928	2.8
6	Certain causes of mortality in early infancy	1,523	2.2
7	Diabetes mellitus	1,512	2.2

**MAJOR CARDIOVASCULAR DISEASES:** As a group, major cardiovascular diseases were responsible for 37,510 deaths or 55 percent of all deaths occurring in 1970. Primarily, diseases of the heart accounted for the major portion (78 percent) of deaths due to major cardiovascular diseases. Fatalities resulting from diseases of the heart numbered 29,351 in 1970 as against the somewhat higher 1969 total of 29,709. The 1970 mortality rate of 408.0 per 100,000 population for diseases of the heart was below the 1969 death rate of 418.2 by 2.4 percent. New Jersey's death rate from diseases of the heart was considerably above the provisional national average of 360.3 per 100,000 population.

Cerebrovascular disease, another subgroup of major cardiovascular diseases, accounted for 6,290 deaths in 1970 as compared with 5,942 deaths in the preceding year. The mortality rate of 87.4 per 100,000 population was 4.4 percent above the 1969 death rate of 83.7. The provisional death rate for the United States was 101.7 per 100,000 population in 1970.

Both diseases of the heart and cerebrovascular diseases take their heaviest toll from two age groups, 45-64 and 65 years and over. The group of diseases of the heart outranks all other diseases as the major killer while cerebrovascular diseases ranks third among principal causes of death.

**CANCER:** With better than 19 percent of all deaths charged to malignant neoplasms, this chronic disease continues as a second leading cause of death. A total of 13,242 cancer deaths and a mortality rate of 184.1 per 100,000 population were experienced during 1970. Comparable figures for 1969 were 12,941 deaths and a rate of 182.2. The provisional rate of 162.0 per 100,000 population for the United States is considerably below New Jersey's rate.

Of the anatomical sites, three which took the greatest toll were cancer of the digestive organs and peritoneum (4,256 deaths), cancer of the respiratory system (2,719 deaths) and cancer of the genitourinary organs (2,104 deaths). Except for the latter site and cancer of the buccal cavity and pharynx (279 deaths), all others showed increases in deaths. Additional information appears in the following table. Age specific rates by primary site appear elsewhere.

Deaths Due to Malignant Neoplasms by Primary Site  
Number and Rate per 100,000 Population

8th Revision Intern'l. List #	Primary Site	1970		1969
		Deaths	Rate	Rate
140 - 209	All Anatomical Sites	13,242	184.1	182.2
140 - 149	Buccal cavity and pharynx	279	3.9	4.1
150 - 159	Digestive organs and peritoneum	4,256	59.2	57.5
160 - 163	Respiratory system	2,719	37.8	37.5
170 - 174	Bone, connective tissue, skin and breast	1,615	22.4	22.6
180 - 189	Genitourinary organs	2,104	29.2	30.6
190 - 199	Other and unspecified sites	1,034	14.4	13.5
200 - 209	Lymphatic and hemato- poietic tissue	1,235	17.2	16.3

ACCIDENTS: Fatalities due to accidents amounted to 2,982 deaths as compared with 3,000 deaths in 1969. The 1970 death rate due to accidents showed a slight improvement, from 42.2 per 100,000 in 1969 to 41.4 in 1970. The New Jersey rate is well below the national average of 54.2 (provisional) per 100,000 population. As a group, accidents appear as the fourth leading cause of death and, in 1970, were responsible for 4.4 percent of all deaths.

Motor vehicle accidents were responsible for 44.5 percent of the fatalities due to accidents. There were 1,326 deaths and a death rate of 18.4 per 100,000 population due to motor vehicle accidents in 1970. Although the 1969 deaths numbered 1,304, the fatality rate was the same as in 1970. Preliminary figures for 1970 show a death rate of 26.2 per 100,000 population for the United States.

Deaths from injuries due to accidental falls totalled 668 in 1970 and were below the 1969 figure of 702 fatalities. The mortality rate in 1970 was 9.3 per 100,000 population as compared with 9.9 in 1969. Of the 668 deaths, 449 occurred in persons 65 years of age and older.

Accidental deaths resulting from drug abuse numbered 207 in 1970. Of this total, 48 deaths occurred in persons less than 20 years of age, 52 deaths were in age group 20-24 years, 35 were between ages 25 and 29 years, and the remaining 72 fatalities were in persons 30 years old or more. Seldom do the medical certification and subsequent inquiries to physicians provide the information as to the specific drug implicated in the death because this is not known. "Narcotic addiction", "drug intoxication" or "acute narcotic intoxications" are the terms used most commonly to indicate cause of death, especially for those in the younger age groups. There were 29 deaths (in the older age groups) which involved a combination of alcohol and drugs.

SELECTED RESPIRATORY DISEASES: Deaths from influenza and pneumonia numbered 1,928 and were 2.8 percent of total deaths in 1970. Ranking fifth among the leading causes of death in both 1960 and 1970, influenza and pneumonia deaths continued downward during 1970 and were 9.3 percent below the 2,125 deaths recorded in 1969. The mortality rate of 26.8 per 100,000 population dropped from the 1969 death rate of 29.9. Pneumonia deaths, in 1970, totalled 1,880 while influenza deaths numbered 48. The estimated death rate for the United States was 30.5 per 100,000 population.

Deaths due to chronic bronchitis declined from 219 in 1969 to 167 in 1970. Asthma deaths numbered 52 in 1970 and 48 in the preceding year. Deaths from emphysema dropped from 690 in 1969 to 675 in 1970. Combined, this group of diseases in 1970 accounted for 894 deaths and yielded a death rate of 12.4 per 100,000 population. Comparable figures for 1969 were 957 deaths and a rate of 13.5. The provisional rate for the nation was 14.9 per 100,000 population.

DIABETES: In 1970, diabetes accounted for 2.2 percent of total deaths and ranked seventh among leading causes of death. Although mortality rates were about the same (21.0 in 1970 and 21.1 per 100,000 population in 1969), deaths were up from 1,499 in 1969 to 1,512 in 1970. For the United States, the death rate was 18.5.

SUICIDE: A decline of 17.6 percent in deaths by suicide occurred in 1970. In the latter year there were 487 deaths as compared with 591 deaths in 1969. The mortality rate of 6.8 per 100,000 population in 1970 was appreciably lower than the death rate of 8.3 recorded a year earlier. The provisional 1970 death rate from suicide for the United States was 11.1 per 100,000 population.

Suicide by firearms and explosives was the most common method of self-destruction and there were 144 such deaths. Suicide by hanging, strangulation and suffocation, next in order of frequency, was responsible for 120 deaths. Third was suicide by solid or liquid substances and this accounted for 83 deaths. Of this latter number 70 deaths involved overdose of drugs or alcohol and drugs in combination.

HOMICIDE: In 1970, homicide deaths numbered 418 and the death rate was 5.8 per 100,000 population. Somewhat lower were the 369 homicide deaths and the 5.2 death rate reported for 1969. The provisional 1970 rate for the United States was 7.6 per 100,000 population. Two of the 418 homicide deaths were in infants less than a year old, seven were in children 1-4 years old, and eight were in the age group 5-14 years.

DEATHS FROM OTHER SELECTED CAUSES: Tuberculosis deaths, higher by 11.4 percent in 1970, totalled 245 as compared with 214 deaths in 1969. The mortality rate in 1970, was 3.4 per 100,000 and 3.0 in 1969. Preliminary figures for the United States show that its tuberculosis death rate was 2.7 in 1970.

There were four deaths due to salmonella infections, two due to amebiasis, 17 from meningococcal infections, one from aseptic meningitis, one from chickenpox, five due to tetanus, 14 from viral encephalitis (unspecified), one from late effects of viral encephalitis, four due to syphilis, and one from leptospirosis.

### Marriages in New Jersey: 1970

New Jersey's total of 56,625 marriages in 1970 exceeded the 55,692 marriages performed in 1969 by 1.7 percent. Although the upward trend in marriages has been continuous since 1959, the rise was at a much slower pace in 1970. In the latter year, the percent increase in marriages was one-half of the percent rise in 1969 and considerably below the 9.6 percent gain experienced in 1968.

The marriage rate of 7.9 per 1,000 population remained the same as in 1969. The range of marriage rates in the past ten years has been between 6.6 (1961) and 7.9. New Jersey's marriage rates are generally lower than those for the nation as a whole. The provisional marriage rate for the United States was 10.7 in 1970 and 10.6 in 1969.

#### Marriages by Month of Occurrence

The largest numbers of marriages occurred in June, August and September while the smallest number took place in March. Fewer marriages were performed in March, since that month fell within the period of Lent.

The following table shows marriages by month of occurrence and the percent which each month represents of the total.

Marriages in New Jersey by Month of Occurrence: 1970  
(Number and Percent of Total)

Month	Number	Percent of Total	Month	Number	Percent of Total
Total	56,625	100.0			
January	3,227	5.7	July	4,706	8.3
February	3,317	5.9	August	6,721	11.9
March	3,139	5.5	September	5,248	9.3
April	4,295	7.6	October	4,993	8.8
May	5,237	9.2	November	4,472	7.9
June	7,448	13.2	December	3,822	6.7

#### Previous Marital Status

As would be expected, single persons (93,664) accounted for 82.7 percent of the 113,250 brides and grooms. Males and females whose previous marriages ended in divorce and who married in 1970 totalled 13,917 persons or 12.3 percent of those married. Widows and widowers numbered 5,669 persons and represented 5.0 percent of all who married.

Marriages between single persons predominated and accounted for 43,145 marriages or 76.2 percent of the total performed. Widows and widowers tend to marry each other and they accounted for 1,469 marriages (2.6 percent). A total of 3,060 marriages (5.4 percent) occurred between divorced persons.

The following table shows the marital status of husbands and wives at the time of marriage.

Previous Marital Status of Husband and Wife: 1970

Wife's Marital Status	Number Wives	Husband's Marital Status		
		Single	Widowed	Divorced
Total	56,625	46,503	2,820	7,302
Single	47,161	43,145	579	3,437
Widowed	2,849	575	1,469	805
Divorced	6,615	2,783	772	3,060

Age at Marriage

Approximately, 49 percent of all persons married in 1970 were between the ages of 20-24, the most popular ages at marriage. Of the 55,853 brides and grooms in this age category, 67 percent married within their own age group. While persons in this age group tend to marry within it, males in the older age groups prefer females in the next lower age groups.

Most of the teenagers who married were 18 or 19 years old. Young adults less than 20 years old numbered 17,452 persons in 1970 and 17,101 in 1969. In both these years as in 1968, teenagers represented 15.4 percent of all persons married. The following table shows the number of brides and grooms less than 20 years of age by age at the time of marriage.

Teen-age Brides and Grooms: 1970

<u>Age</u>	<u>Total</u>	<u>Brides</u>	<u>Grooms</u>
Under 15 years	55	54	1
15 years	234	230	4
16 "	1,065	998	67

Note: Rates are per 1,000 live births except the perinatal death rate which represents the number of infant deaths under 7 days plus fetal deaths per thousand live births plus fetal deaths. Perinatal deaths not available prior to 1947. Beginning with 1951, neonatal deaths include only deaths under 28 days of age.
