STATE COMMISSIONER OF HEALTH

November, 1972

The tenth annual report, New Jersey Health Statistics, is presented for calendar year 1971. It provides basic statistics related to births, deaths, marriages and reportable diseases for the State as a whole, its twenty-one counties and, in selected instances, by municipality. These data are allocated by residence, except for marriages, which are shown by place of occurrence.

A handwritten signature in cursive script that reads "James R. Cowan".

James R. Cowan, M.D.  
State Commissioner of Health

## TABLE OF CONTENTS

Table No.	Page No.
Report of the Public Health Statistics Program, Calendar Year, 1971 . . . . .	1
1. Population Estimates, Births, Marriages (by Occurrence) And Deaths, Numbers And Rates Per 1,000 Population: 1947 - 1971 . . . . .	9
2. Resident Births By Legitimacy By Color For Counties And Major Cities: 1971 . . . . .	10
3. Resident Births By Weight Group By Age Group Of Mother: 1971 . . . . .	11
4. Births, Marriages By Occurrence, Deaths, Infant Deaths And Maternal Deaths By Counties And Major Cities (Numbers and Rates): 1971 . . . . .	12
Marriages In New Jersey: 1971 . . . . .	13
5. Marriages In New Jersey By Age Of Husband By Age Of Wife: 1971 . . . . .	15
6. Births And Infant, Neonatal, Fetal, Perinatal And Maternal Deaths (Numbers And Rates): 1947 - 1971 . . . . .	16
7. Infant Deaths, Neonatal Deaths And Perinatal Deaths By Counties And Major Cities: 1971 . . . . .	17
8. Infant Deaths By Cause And Age: 1971 . . . . .	18
9. Births, Marriages, Deaths, Fetal Deaths, Infant Deaths, And Neonatal Deaths By Counties And Municipalities: 1971 . . . . .	20
10. Serum And Infectious Hepatitis Cases By Age Group By Sex: 1971 (Provisional Figures) . . . . .	33
11. Annual Summary Of Notifiable Diseases By County Of Residence: 1971 . . . . .	34
12. Tuberculosis Cases And Deaths By Counties And Major Cities, Numbers And Rates Per 100,000 Estimated Population: 1971 . . . . .	35
13. Cases Of Syphilis By Stage And Gonorrhea, Numbers And Rates Per 100,000 Estimated Population (Civilian Cases Only): 1952 - 1971 . . . . .	36
14. Syphilis And Gonorrhea Cases By Counties And Major Cities, Numbers And Rates Per 100,000 Estimated Population: 1971 . . . . .	37
15. Principal Causes Of Death By Specified Age Groups: 1971 . . . . .	38
16. Motor Vehicle Deaths In New Jersey By Cause Of Death By Age: 1971 . . . . .	40
17. Deaths From All Accidents, Cancer, Diabetes, Heart Diseases, And Cerebrovascular Diseases By Counties And Major Cities (Numbers And Rates per 100,000 Population): 1971 . . . . .	41
18. Deaths And Death Rates Per 100,000 Population For Diseases Of The Circulatory System By Cause Group By Age And Sex: 1971 . . . . .	42

**Report of the Public Health Statistics Program  
Calendar Year, 1971**

**INTRODUCTION:** This report, published as a separate document since 1962, presents basic data obtained from original birth, marriage, death and fetal death records filed, as required by law, with the Vital Statistics Registration Program. It includes a number of tables showing tuberculosis and venereal disease morbidity as well as cases of other reportable diseases. The Tuberculosis Control Program collects the required tuberculosis case reports, the Venereal Disease Control Program is responsible for the collection of the confidential reports of syphilis and gonorrhea, and the Communicable Disease Control Program receives reports of all other reportable diseases. Population estimates, appearing in this publication and used to compute rates, are provided by the Office of Business Economics, Department of Labor and Industry.

The joint efforts of personnel in the above-mentioned Programs and those of Data Processing, Public Health Statistics, and Graphic Arts make this report possible.

**POPULATION:** New Jersey's population, estimated at 7,303,000 as of July 1, 1971, shows an increase of 108,545 persons or 1.5 percent above the estimate of 7,194,455 in mid 1970. Of the total increase, 43,696 or 40.3 percent can be attributed to the excess of births over deaths (natural increase) and 64,849 or 59.7 percent of the gain resulted from net migration change. The sizeable decline in births, coupled with a slackening in the rate of in-migration, account for population growth below the average annual increase of 1.8 percent experienced during 1960-1970.

**VITAL EVENTS IN NEW JERSEY:** During 1971, New Jersey had a 6.4 percent decline in births delivered in New Jersey, a 0.2 percent drop in marriages occurring in the State, and a rise of 1.0 percent in deaths which took place in New Jersey. A total of 109,577 live births occurred in 1971 as compared with the higher total of 117,019 for 1970. Marriages numbered 56,531 in 1971, having declined from 56,625 in 1970. Deaths in New Jersey increased from 66,848 in 1970 to 67,509 deaths in 1971. Distribution of these events, by month of occurrence, follow.

Vital Events Occurring in New Jersey, by Month of Occurrence: 1971

<u>Month</u>	<u>Births</u>	<u>Marriages</u>	<u>Deaths</u>
TOTAL	109,577	56,531	67,509
January	9,616	3,227	6,072
February	8,846	3,129	5,539
March	9,731	2,999	5,783
April	9,101	4,127	5,608
May	8,980	5,309	5,513
June	8,926	6,965	5,543
July	9,240	5,414	5,580
August	9,552	6,198	5,396
September	9,244	5,290	5,232
October	9,181	5,370	5,692
November	8,487	4,532	5,575
December	8,673	3,971	5,976

BIRTHS IN NEW JERSEY: Most of the children born in New Jersey during 1971 were delivered in hospitals. Of the 109,577 babies, 99.7 percent (109,277 babies) were delivered in hospitals while 300 infants were born elsewhere. Physicians attended 109,445 births and nonmedical personnel delivered 132 babies. Although there were 34 registered midwives in New Jersey, midwives did not deliver any babies in 1971.

Of the 2,206 multiple births which occurred in the State, twins numbered 2,171 while triplets numbered 35. Twins and triplets who are born alive are counted as live births while those who were born dead are counted as fetal deaths. Thus, the preceding figures are not necessarily multiples of two or three.

Male babies (56,091) represented 51.2 percent of the births in New Jersey while females (53,486) were 48.8 percent of the total. The sex ratio was 105 males for each 100 females born. March, January and August, in that rank order, had the largest number of births while the lowest number was recorded in November. Nonresidents born in New Jersey in 1971 equalled 1,338 babies.

RESIDENT BIRTHS: New Jersey experienced a drop of 7.3 percent in resident live births in 1971. The decline was from 120,168 births in 1970 to 111,376 in 1971. Birth rates, per 1,000 estimated population, were 15.2 in 1971 and 16.7 in 1970. The estimated 1971 birth rate for the Nation was 17.3 per 1,000 population, having dropped from 18.2 in 1970.

Race was not stated on 535 birth certificates in 1971 while, in 1970, this item was omitted on 1,556 birth records. Based on records which gave information on race, there were 89,385 white babies born in 1971 as compared with 96,352 white infants in 1970 while 21,456 nonwhite babies were born in 1971 as against 22,260 nonwhite infants in 1970. The decline amounted to 7.2 percent in white births and 3.6 percent in nonwhite births.

The severe drop in the number of births is due to a number of factors. Through a voluntary interchange system between states, the State Registrar received 3,137 copies of birth records for New Jersey residents born out-of-state. This total was approximately 1,200 records short of the number which should have been received specifically from New York City's Records and Statistics Office by the time 1971 counts were to be prepared for New Jersey. An additional 1,200 resident birth records would have increased the resident birth count to 112,576. Primarily, this shortage affects Bergen, Essex and Hudson counties since many of their residents enter New York City hospitals for service.

The Family Planning Evaluation Branch of the Center for Disease Control provided data which showed that 20,179 legal abortions were performed on New Jersey women during calendar year 1971. Of this total, 18,907 were performed in New York City, 1,269 abortions in upstate New York and three in Maryland. The ratio of abortions per 1,000 live births was 181.2. It is not known to what extent legal abortions contributed to the decrease in the number of live births since it is not known how many New Jersey women underwent illegal abortions in prior years. The sizeable decline in births to white women may be due in part to the large number of abortions which occurred in 1971.

The fertility rate per 1,000 women of childbearing age (15-44 years) was 74.0 as compared with 81.2 births in 1970. This represents a drop of 8.9 percent. The fertility rate for the United States decreased by 6.0 percent from 87.6 births in 1970 to 82.3 babies in 1971.

New Jersey's fertility rate has been on a downward trend since the high of 106.1 births per 1,000 women of childbearing age occurred in 1960. The fertility rate of 81.2 births per 1,000 females aged 15-44 years in 1970 represents a decrease of 23.5 percent since 1960. The continued decline in the fertility rate in 1971 to 74.0 births brought the decrease in fertility rates to 30.3 percent for the period 1960-1971.

Some other reasons for the downward trend in births and birth rates are: preference for smaller families, the wide use of contraceptives, a change in economic conditions, and the entrance of women into the labor market in increasing numbers to supplement family income.

BIRTHS OUT-OF-WEDLOCK: In New Jersey, births out-of-wedlock consist of two categories - an infant born to a female who was not married and an infant born to a married woman whose husband did not father that child. An item on the New Jersey birth certificate requires an answer to the following: "Legitimate Yes  No ". Counts are based on the answer given.

In 1971, there were 12,874 babies born out-of-wedlock, representing 11.6 percent of total live births. Comparable figures for 1970 were 13,098 births, accounting for 10.9 percent of resident live births. The 1971 total of births out-of-wedlock was below the 1970 total by 1.7 percent. Age of mother is shown in the following table for infants counted as having been born in wedlock and out-of-wedlock.

Babies Born In Wedlock and Out-of-Wedlock  
By Age of Mother: 1971  
(Number and Percent of Total)

Age of Mother	Total Births	In Wedlock		Out-of-Wedlock	
		Number	Percent	Number	Percent
All Ages	111,376	98,502	88.4	12,874	11.6
10 - 14	314	35	11.1	279	88.9
15 - 19	14,039	8,456	60.2	5,583	39.8
20 - 24	37,872	33,703	89.0	4,169	11.0
25 - 29	35,633	33,981	95.4	1,652	4.6
30 - 34	15,735	14,958	95.1	777	4.9
35 - 39	6,196	5,866	94.7	330	5.3
40 - 44	1,511	1,432	94.8	79	5.2
45 - 49	74	69	93.2	5	6.8
Unknown	2	2	100.0		

RESIDENT BIRTHS BY BIRTH WEIGHT: Birth certificates on which birth weight was stated numbered 110,598 while 778 records omitted this information. Most infants (92 percent) weighed 2501 grams or more. Those weighing 5 lbs. 8 ozs. or less (2500 grams or less) are classified as immature and, in 1971, numbered 8,836 or

8.0 percent of the births for which weight was stated. Of the 98,502 births to married mothers, 7.1 percent or 6,948 infants were immature. Babies born out-of-wedlock totalled 12,874 and, of those, 14.7 percent or 1,888 infants were immature. Race was not stated for two of the 8,836 immature babies, but 5,851 (66.2 percent) were stated as white and 2,983 (33.8 percent) were nonwhite.

DEATHS: In 1971, resident deaths totalled 67,680 and resulted in a death rate of 9.3 per 1,000 estimated population. There was little change in deaths or death rate from the year preceding, since deaths amounted to 67,976 and the death rate was 9.4 in 1970. As in 1970, the decline in the 1971 death rate was 1.1 percent. Similarly, the estimated death rate for the United States was 9.3 and was down by 1.1 percent from the 1970 rate of 9.4 per 1,000 estimated population.

There were 2,480 deaths of nonresidents in New Jersey while 2,651 residents of New Jersey died out-of-state in 1971.

INFANT DEATHS: A reduction of 12.9 percent in the number of deaths under one year occurred when infant deaths declined from 2,406 in 1970 to 2,095 in 1971. The infant mortality rate of 18.8 per 1,000 live births was 6.0 percent below the 1970 rate of 20.0. Figures for the United States show that the estimated infant mortality rate of 19.2 per 1,000 live births was under the rate of 19.8 in 1970 by 3.0 percent. The 1971 infant mortality rates for the United States and New Jersey were the lowest annual rates ever experienced by either.

New Jersey's rate has been affected, to some extent, by the incomplete number of death records received from New York City by the time statistical processing of vital events records had to begin. The high rate of legal abortions performed may have helped to reduce the infant mortality rate in 1971.

A numerical decrease of 15.8 percent in neonatal deaths occurred in 1971 when deaths of infants less than 28 days old totalled 1,612 as compared with 1,915 neonatal deaths in 1970. Death rates for this category of infants were 14.5 per 1,000 live births in 1971 and 15.9 for the preceding year. The decrease of 8.8 percent in the 1971 neonatal death rate contributed greatly to the reduction in infant mortality for that year. The estimated neonatal death rate for the United States amounted to 14.3 per 1,000 live births as against 14.9 in 1970.

Perinatal deaths, which are a combination of fetal deaths and deaths of infants less than seven days old, declined from 3,445 deaths in 1970 to 2,934 in 1971, or 14.8 percent. In 1971, the perinatal mortality rate of 26.0 per 1,000 total deliveries was lower than the 1970 rate of 28.3 by 8.1 percent.

Selected causes of mortality are shown in the following table for infants under one year of age and, separately, for babies who did not complete their 28th day of life. The major group, Certain Causes of Mortality in Early Infancy, accounted for 1,313 deaths. Within this broad group, 305 deaths were charged to asphyxia of the newborn (unspecified), 262 infant deaths were due to immaturity (unqualified) and 189 deaths were assigned to respiratory distress syndrome. Congenital anomalies, as a group, were responsible for 300 infant deaths. Third in order of frequency was pneumonia with 178 deaths. There were no infant deaths due to influenza.

Selected Principal Causes of Death of Infants Under One Year  
And Under 28 Days of Age, Number and Rate per 1,000 Live Births

Cause of Death	Under 1 Year		Under 28 Days	
	Number	Rate	Number	Rate
Asphyxia of newborn, unspecified	305	2.7	303	2.7
Congenital anomalies	300	2.7	204	1.8
Immaturity, unqualified	262	2.4	260	2.3
Respiratory distress syndrome	189	1.7	189	1.7
Pneumonia	178	1.6	42	0.4
Hyaline membrane disease	96	0.9	96	0.9
Accidents	57	0.5	4	< 0.1

*Maternal deaths should be figured per 10,000 live births*  
**MATERNAL DEATHS:** There were 25 maternal deaths in 1971 with 12 in the age group 15-24 and 13 deaths in age group 25-44 years. The maternal death rate amounted to 0.2 per 1,000 live births. A total of 38 maternal deaths with a death rate of 0.3 occurred in 1970. The decline (34.2 percent) in maternal deaths was the largest since 1968 when maternal deaths numbered 32. The maternal death rate of 0.2 is a record low for New Jersey.

**FETAL DEATHS:** An infant who dies before or during delivery, has shown no evidence of life after complete birth, and has reached the 20th week of gestation, must be registered as a fetal death. Fetal deaths, so registered, numbered 1,441 in 1971 as compared with 1,698 fetal deaths in 1970. The fetal death rate of 12.9 per 1,000 live births was 8.5 percent below the 1970 fetal death rate of 14.1.

Of the 1,441 fetal deaths, 869 or 60.3 percent were premature, weighing 2500 grams or less, while the remaining 394 fetal deaths were full term (over 2500 grams) and represented 27.3 percent of all fetal deaths. Weight information was omitted on 178 records. Most fetal deaths occurred to mothers 25 years old or more while 649 such deaths were to mothers under 25 years of age.

**LEADING CAUSES OF DEATH:** Approximately, 82 percent of resident deaths were due to six leading causes of death. These are shown below in order of frequency and as a percent of total deaths. Except for accidents and diabetes, the remaining principal causes took slightly lower tolls in 1971 than in the preceding year.

<u>Rank</u>	<u>Causes</u>	<u>Deaths</u>	<u>Percent of Total</u>
	Total Deaths	67,680	100.0
1	Diseases of heart	29,345	43.4
2	Malignant neoplasms	13,085	19.3
3	Cerebrovascular disease	6,262	9.3
4	Accidents	3,021	4.5
5	Influenza and pneumonia	1,865	2.8
6	Diabetes mellitus	1,524	2.3

Four of the leading causes, diseases of the heart, malignant neoplasms, cerebrovascular disease and diabetes mellitus, are diseases generally associated with aging. Not to be overlooked are the younger age groups in which one or more of these diseases appears among the leading causes of death.

**MAJOR CARDIOVASCULAR DISEASES:** There were 37,492 deaths or 55.4 percent of all deaths charged to major cardiovascular diseases. This total consisted of 29,345 deaths due to diseases of the heart, 6,262 deaths assigned to cerebrovascular diseases, 803 deaths from arteriosclerosis, 822 deaths due to diseases of arteries, arterioles and capillaries and 260 deaths from hypertension.

While the number of deaths due to diseases of the heart showed little change, dropping from 29,351 fatalities in 1970 to 29,345 in 1971, the mortality rate of 401.8 per 100,000 population was below the 1970 death rate of 408.0. The estimated death rate for the United States was 359.5 per 100,000 population in 1971. Heart disease deaths consisted largely of deaths due to acute myocardial infarction (13,479 deaths) and ischemic heart disease (13,898 deaths). As a primary cause of death for all ages, heart disease also ranks first in age groups 25-44, 45-64 and 65 years and older.

Cerebrovascular disease deaths totalled 6,262 in 1971 and resulted in a death rate of 85.7 per 100,000 population. Comparable figures for 1970 were 6,290 deaths with a death rate of 87.4 per 100,000 population. The death rate for the United States was estimated at 100.9 per 100,000 population in 1971. Cerebrovascular disease appears as the third leading cause of death for all ages and for age groups 45-64 (956 deaths) and 65 years and over (5,117).

**CANCER:** Malignant neoplasms were responsible for 13,085 deaths and a mortality rate of 179.2 per 100,000 population. In 1970, there were 13,242 deaths and a cancer death rate of 184.1. The estimated mortality rate for the United States was 161.4 per 100,000 population in 1971. Cancer continued as the second leading cause of death for all ages and ranked second in each age group except 1-4 years and 15-24 years where this cause was third in order of frequency. Most of its victims were in the age groups 45-64 years (4,879 deaths) and 65 years and over (7,347 deaths).

A table follows, showing deaths and death rates by anatomical site of cancer.

Deaths Due to Malignant Neoplasms by Primary Site  
Number and Rate per 100,000 Population

8th Revision Intern'l. List #	Primary Site	1971		1970
		Deaths	Rate	Rate
140-209	All Anatomical Sites	13,085	179.2	184.1
140-149	Buccal cavity and pharynx	284	3.9	3.9
150-159	Digestive organs and peritoneum	4,109	56.3	59.2
160-163	Respiratory system	2,797	38.3	37.8
170-174	Bone, connective tissue, skin and breast	1,554	21.3	22.4
180-189	Genitourinary organs	2,172	29.7	29.2
190-199	Other and unspecified sites	1,049	14.4	14.4
200-209	Lymphatic and hematopoietic tissue	1,120	15.3	17.2

**ACCIDENTS:** Continuing fourth in order of frequency, accidents resulted in 3,021 fatalities and a death rate of 41.4 per 100,000 population. Although a slightly lower number of deaths (2,982) occurred in 1970, the fatality rate was the same as in 1971. New Jersey's rate of 41.4 in 1971 was below the national average of 53.9 (estimated) per 100,000 population. Accidents appear as the primary cause of death in age groups 1-4 years, 5-14 years and 15-24 years, and among the principal causes of death in the remaining age groups.

Deaths resulting from injuries sustained in motor vehicle accidents totalled 1,317 with a fatality rate of 18.0 per 100,000 population. This compares with 1,326 deaths in 1970 and a death rate of 18.4. The estimated rate for the United States in 1971 was 25.5 per 100,000 population.

In New Jersey, 25 pedal cyclists (15 aged 5-14 years, 10 between 15-24 years) died of injuries in 1971. There were 46 fatalities resulting from injuries suffered in motorcycle accidents in New Jersey. Nine of these involved passengers on the motorcycle. Of the 46 persons who died in motorcycle accidents, two were 5-14 years old, 33 were in the age group 15-24 years, 10 were 25-44 years of age, and one was 45 years old or over.

Accidental falls resulting in death totalled 659 in 1971 as compared with 668 fatalities in 1970. The death rates were 9.0 in 1971 and 9.3 for the year preceding. Deaths due to accidental falls were highest in persons 45 years and older and amounted to 552 in 1971.

Narcotic drugs accounted for 223 accidental deaths in New Jersey in 1971 as compared with 209 in the preceding year. Resultant mortality rates were 3.1 per 100,000 population in 1971 and 2.9 in 1970. A total of 179 males (95 white, 84 nonwhite) and 44 females (24 white, 20 nonwhite) died from drug overdose. Age distribution of deaths showed two infants less than a year old, two children 5-14 years old, 41 teenagers 15-19 years of age, 89 victims in age group 20-24 years, 42 persons 25-29 years old and 47 individuals 30 years old and over. Since the medical certification on the death certificate contains little information on drug(s) taken by the victim, it is not possible to give much specific detail. Heroin was implicated in 22 deaths, one of which was in combination with morphine, and two with alcohol. In addition to the two deaths involving alcohol and heroin, 14 more accidental deaths were due to adverse effects from alcohol and other drug(s). Of the 223 narcotic drug deaths in New Jersey, three were New York residents, one was a resident of Pennsylvania and one of Michigan.

**INFLUENZA AND PNEUMONIA:** Ranking fifth among leading causes of death, influenza and pneumonia deaths numbered 1,865 as against a higher total of 1,928 deaths in 1970. The mortality rates were 25.5 per 100,000 population in 1971 as compared with 26.8 in 1970. The estimated death rate for the United States in 1971 was 27.3 per 100,000 population. There were fewer influenza deaths in 1971 and the total was 29 deaths for the year.

**DIABETES:** A slight numerical increase in deaths due to diabetes mellitus was noted in 1971 when 1,524 deaths were attributed to this cause as compared with 1,512 in 1970. There was little change in the mortality rate for 1971 since the rate amounted to 20.9 per 100,000 population as compared with 21.0 in the year preceding. Diabetes claimed the lives of more females (918) than males (606) with most of its victims 65 years of age and over. Diabetes ranked as the sixth leading cause of death for all ages. The 1971 death rate for the United States was estimated at 18.3 per 100,000 population.

SUICIDE: A rise of 17 percent in deaths by suicide occurred in 1971 when suicide deaths increased to 570 from 487 deaths in the preceding year. The death rate of 7.8 per 100,000 population was above the 1970 rate of 6.8 for this cause. The 1971 estimated death rate for suicide was 11.2 for the Nation as a whole.

The greatest number of deaths (178) resulted from suicide by firearms and explosives; next in rank order was death by hanging, strangulation and suffocation (162 deaths); and third most frequent means of destruction was by solid or liquid substances (84 deaths). More males (403) than females (167) terminated their lives by suicide. Of the total, 58 percent were 45 years and older.

HOMICIDE: Fatalities resulting from homicide totalled 458 as against 418 deaths in 1970. Mortality rates were 6.3 in 1971 and 5.8 per 100,000 population in 1970. New Jersey's rate of 6.3 was below the national average of 8.5 (estimated) per 100,000 population. Distribution by age included 6 infants less than one year old, 10 children 1-4 years old, 4 children 5-14 years old, 107 young adults 15-24 years of age, 207 persons in age group 25-44 years, and 124 individuals 45 years old and over.

OTHER SELECTED CAUSES: As a group, chronic bronchitis, emphysema and asthma accounted for 827 deaths, yielding a death rate of 11.3 per 100,000 population. Comparable figures for 1970 were 894 deaths with a death rate of 12.4. The 1971 estimated rate for the United States was 14.5 per 100,000 population. The decrease occurred primarily in deaths due to emphysema which dropped from 675 to 608 deaths, or approximately 11 percent. In 1971, there were 171 deaths assigned to chronic bronchitis and 48 deaths to asthma.

Tuberculosis claimed the lives of 217 residents in 1971 as compared with 245 deaths a year earlier. The tuberculosis mortality rate of 3.0 per 100,000 population was somewhat below the 1970 rate of 3.4. In 1971, New Jersey's rate was above the estimated rate of 2.1 for the United States.

TABLE 1: POPULATION ESTIMATES, BIRTHS, MARRIAGES (by Occurrence) AND DEATHS  
NUMBERS AND RATES PER 1,000 POPULATION: 1947 - 1971

## Marriages in New Jersey: 1971

Marriages performed in New Jersey during 1971 numbered 56,531 as compared with a slightly higher total of 56,625 in 1970. The marriage rate was down from 7.9 per 1,000 population in 1970 to 7.7 in 1971. Though the numerical decline amounted to less than 0.2 percent, the drop was the first since 1959 when a small increase over marriages in 1958 signaled the beginning of an upward trend. Marriages rose from 38,659 in 1959 to 56,625 in 1970, while the range of rates was between 6.5 (1959) and 7.9 (1970) per 1,000 population. Based on provisional figures, the marriage rate for the United States was 10.6 in 1971 as compared with 10.7 in 1970.

### Marriages by Month of Occurrence

The summer months of June, August and July, in that order, were the most frequently selected months for marriage. Combined, these three months accounted for a third of the marriages performed in 1971. Fewest marriages occurred in the months of January, February, March and December. The smallest number of marriages for any month was in March when 2,999 marriages took place. March falls within the Lenten period when fewer marriages are solemnized. The largest number of marriages occurred in June when 6,965 marriages occurred. A distribution of marriages by month of occurrence is shown together with the percent each monthly total represents of the annual total.

Marriages Performed in New Jersey by Month of Occurrence: 1971  
(Number and Percent of Total)

Month	Number	Percent of Total	Month	Number	Percent of Total
Total	56,531	100.0			
January	3,227	5.7	July	5,414	9.6
February	3,129	5.5	August	6,198	11.0
March	2,999	5.3	September	5,290	9.4
April	4,127	7.3	October	5,370	9.5
May	5,309	9.4	November	4,532	8.0
June	6,965	12.3	December	3,971	7.0

### Previous Marital Status

Of the 113,062 persons married, 82 percent (92,494) were single, 5 percent (5,651) were widowed and 13 percent (14,917) were divorced. While decreases in the number of persons married occurred in both the single and widowed categories, 1,000 more divorced persons married in 1971 than did so in the year preceding.

Marriages between single brides and single grooms numbered 42,351 representing 74.9 percent of all marriages performed. There were 1,461 (2.6 percent) marriages between widows and widowers, and 3,358 (5.9 percent) marriages between divorced persons. Marital status, prior to marriage, is shown for brides and grooms in the table following.

Previous Marital Status of Husband and Wife: 1971

Wife's Marital Status	Number of Wives	Husband's Marital Status		
		Single	Widowed	Divorced
Total	56,531	45,849	2,860	7,822
Single	46,645	42,351	588	3,706
Widowed	2,791	572	1,461	758
Divorced	7,095	2,926	811	3,358

Age at Marriage

Slightly fewer persons under 20 years of age married in 1971 than in the preceding year. There were 17,029 teenagers married in 1971 as against 17,452 in 1970. Almost three times as many females as males comprised this age group. These young adults, most of whom were 18 and 19 years old, represented 15.1 percent of all persons married as compared with 15.4 percent in 1970. The following table shows the number of males and females who married prior to reaching age 20.

Teen-age Brides and Grooms: 1971

Age	Total	Brides	Grooms
Under 15 years	58	58	
15 years	251	245	6
16 "	1,042	991	51
17 "	2,200	1,822	378
18 "	5,591	4,230	1,361
19 "	7,887	5,375	2,512
Total < 20 years	17,029	12,721	4,308

Most persons who married in 1971 were between 20-24 years of age. There were 54,017 brides and grooms in this age group and they comprised about 48 percent of all persons married. Second in rank order were those in the age group 25-29 years. They numbered 18,785 and were 16.6 percent of total persons married. At ages 65 years and over, there were 1,479 persons who married. Of this total, 700 were 70 or more years old. In the age group 65 years or more, males (1,012) outnumbered females (467). Most females in this age bracket married males in their own age group, while males generally selected younger mates.

A table follows showing the number of persons married in 1971 by age of husband by age of wife.
