JOANNE E. FINLEY, M.D., M.P.H.
COMMISSIONER

December, 1979

This report is the seventeenth of a series of annual reports published by the New Jersey State Department of Health, summarizing birth, marriage, death and morbidity statistics for the calendar year ending December 31, 1978.

The vital statistics reporting system is the oldest health statistics reporting system in the United States, and today remains, the backbone of all health data systems. Birth, marriage, and death statistics, when utilized properly, can serve as an important indicator of health status and social welfare, and when interpreted correctly, can indicate where the need for improvement or change in the health care delivery system exists.

This report has been expanded to include additional materials which have proven to be useful in developing a more complete and accurate picture of the health status of the citizens of this state. I commend the contents to your careful study and analysis.

A handwritten signature in cursive script, reading "Joanne E. Finley, M.D., M.P.H." with a stylized flourish at the end.

Joanne E. Finley, M.D., M.P.H.
State Commissioner of Health

TABLE OF CONTENTS

Table No.		Page No.
	INTRODUCTION	1
1.	Estimated Population by Age, by Race, by Sex: 1978	2
2.	Population Estimates, Resident Births, Marriages (by Occurrence) and Resident Deaths, Numbers and Rates per 1,000 population: 1954 - 1978	3
3.	Resident Births, Marriages (by Occurrence) and Resident Deaths, Numbers and Rates per 1,000 Estimated Population, Counties and Selected Places: 1978	4
4.	Estimated Population, Births, Marriages (by Occurrence) Deaths, Infant Deaths, Fetal Deaths and Neonatal Deaths, Residents of New Jersey: 1978	5
	BIRTHS	19
5.	Resident Births by Age of Mother, by Legitimacy, by Race: 1978	20
6.	Resident Births by Age of Mother, by Race, by Sex: 1978	21
7.	Resident Births by Age of Mother by Weight Group: 1978	22
8.	Resident Births by Weight Group by Race: 1978	23
9.	Resident Births by Legitimacy, by Race, Counties and Selected Places: 1978	24
10.	Resident Births by Maturity, Counties and Selected Places: 1978	25
11.	Resident Births by Month of Pregnancy Prenatal Care Began, Counties and Selected Places: 1978	26
12.	Resident Births by Sex, by Race, Counties and Selected Places: 1978	27
13.	Resident Births by Age of Mother, by Race, Counties and Selected Places: 1978	
	A. All Races	28
	B. White	29
	C. Nonwhite	30
	D. Race Unknown	31
	MARRIAGES	32
14.	Previous Marital Status of Husband and Wife: 1978	33
15.	Estimated Average Age at Marriage, 10 Year Trend	33
16.	Marriage Trends for 1977 and 1978, by Month	34
17.	Marriages in New Jersey by Age of Wife, by Age of Husband: 1978	35

Table No.		Page No.
	MORTALITY	36
18.	Principal Causes of Resident Deaths by Age, Numbers and Age-Specific Rates: 1978	38
19.	Five Leading Causes of Resident Deaths by Age: 1978	
	A. White Males	41
	B. White Females	42
	C. Nonwhite Males	43
	D. Nonwhite Females	44
20.	Resident Deaths by Cause Group, by Age, by Sex: 1978	
	A. All Races, Both Sexes	45
	B. All Races, Males	46
	C. All Races, Females	47
	D. White, Both Sexes	48
	E. White, Males	49
	F. White, Females	50
	G. Nonwhite, Both Sexes	51
	H. Nonwhite, Males	52
	I. Nonwhite, Females	53
21.	Resident Deaths by 3-Digit Cause by Sex and Age Groups: 1978	54
22.	Resident Deaths by Age, Sex, and Race, Counties and Selected Places: 1978	
	A. All Races, Both Sexes	72
	B. All Races, Male	73
	C. All Races, Females	74
	D. White, Both Sexes	75
	E. White, Males	76
	F. White, Females	77
	G. Nonwhite, Both Sexes	78
	H. Nonwhite, Males	79

Table No.		Page No.
	I. Nonwhite, Females	80
23.	Infant, Fetal, Neonatal, Perinatal and Maternal Resident Deaths, Numbers and Rates: 1954 - 1978	81
24.	Principal Causes of Infant Deaths: 1978	82
25.	Resident Infant Deaths by Cause, by Age: 1978	83
26.	Resident Infant, Fetal, Neonatal and Perinatal Deaths, Counties and Selected Places: 1978	
	A. All Races	85
	B. White	86
	C. Nonwhite	87
27.	Resident Maternal Deaths by Race, Counties and Selected Places: 1978	88
28.	Accidental Resident Deaths by Cause Group, by Age, Numbers and Age-Specific Rates per 100,000 Estimated Population: 1978	89
29.	Accidental Resident Deaths by Selected Cause Groups, Counties and Selected Places, Numbers and Rates per 100,000 Estimated Population: 1978	90
30.	Motor Vehicle Deaths in New Jersey by Cause Group, by Age: 1978	91
31.	Resident Motor Vehicle Deaths by Cause Group, Counties and Selected Places: 1978	92
32.	Accident, Homicide and Suicide Deaths, Numbers and Rates per 100,000 Estimated Population: 1954 - 1978	93
33.	Deaths from All Accidents, Cancer, Heart Diseases, Diabetes, and Cerebrovascular Diseases, Counties and Selected Places, Numbers and Rates per 100,000 Estimated Population: 1978	94
34.	Cancer, Diabetes, Heart Disease and Cerebrovascular Disease Deaths, Numbers and Rates per 100,000 Estimated Population: 1954 - 1978	95
35.	Resident Deaths Due to Neoplasms by Cause Group, Age and Sex, Numbers, Age-Specific Rates, Sex-Specific Rates per 100,000 Estimated Population: 1978	96
36.	Resident Deaths Due to Diseases of the Circulatory System by Age and Sex, Numbers, Age-Specific Rates, Sex-Specific Rates per 100,000 Estimated Population: 1978	97
37.	Resident Deaths from Selected Respiratory Diseases by Sex and Age: 1978	98
38.	Resident Circulatory Disease Deaths by Cause Group, Counties and Selected Places, Numbers and Rates per 100,000 Estimated Population: 1978	99

APPENDIX B

Selected Vital Events in 1978, By Health Systems Agencies	163
---	-----

INTRODUCTION

This report is the seventeenth of a series of annual reports summarizing vital statistics data for the state of New Jersey.

Birth, marriage, death and fetal death statistics included in this report were gathered from certificates filed with the state registrar prior to May 1, 1979. Through a reciprocal arrangement between states, copies of birth, death, and fetal death certificates involving out-of-state occurrences are interchanged, making a complete tabulation of resident information possible. Copies of marriage certificates are not interchanged between states. Marriage rates, as computed in this report, are by place of occurrence rather than place of residence.

The Tuberculosis Services Program, the Venereal Disease Control Program, and the Communicable Disease Control Program are responsible by law for maintaining confidential files on "reportable diseases". Statistics generated by these units are included in this report.

The Office of Demographic and Economic Analysis, Department of Labor and Industry provided July 1, 1978 estimates of the population of New Jersey and its 567 municipalities. Age, race and sex specific population estimates for 1978 as shown in this report are estimates developed by Health Data Services, and are used for statistical purposes only.

641 097

In 1978, there were 93,356 resident births, a slight decline of 0.5 percent from the reported 93,786 resident births in 1977. The birth rate remained at the 1977 level of 12.7 births per 1,000 population. There were 93,036 births to women 15-44 years of age compared to 93,506 in 1977. The estimated fertility rate in 1978 was 58.6, down slightly from the 1977 rate of 58.9.

In 1978 there were 71,637 births reported among the white population 20,128 births reported among the nonwhite population, and 1,591 births of unreported race. White births decreased 1.8 percent while nonwhite births increased 4.6 percent.

Of total births, 18,273, nearly 1 in 5, were illegitimate in 1978. A total of 6,990, or 38.3 percent, of those born out-of-wedlock were born to white mothers while 61.5 percent, or 11,241 births, were to nonwhite mothers. In 1977, 16,480, 17.6 percent, of all births were illegitimate, 38.5 percent among the white population, and 61.5 percent among the non-white population. From 1977 to 1978 the portion of white illegitimate births among all white births increased from 8.7 percent to 9.8 percent. Among nonwhite births, the percentage of illegitimate increased from 52.6 percent to 55.9 percent. During 1978, illegitimate births decreased in the 15-19 age groups, down from 43.3 percent to 41.2 percent of all out-of-wedlock births. A comparable increase from 34.2 percent to 36.3 percent in the 20-24 age groups was noted. Of all illegitimate births, 42.6 percent were to mothers aged 19 years or less in 1978.

In 1978, birth weight was provided on 98.1 percent of resident birth certificates. Birth weight is one of the variables used to measure the health of infants. Low birth weight infants tend to develop more problems during the first year of life than babies weighing 2,500 grams or less (5 lb. 8 oz.) at birth. In 1978 there were 6,880 immature births reported (7.4%), the same proportion as in 1977. Among the white population, 4,182 (5.8%) of all births were 2,500 grams or less while 2,695 (13.4%) of non-white births were immature. Teenage mothers delivered 1,414 immature babies (11.8% of teenage births).

In 1978, there was considerable improvement in the reporting of prenatal care history. Only 5.1 percent of the birth certificates did not contain prenatal history compared to over 8.3 percent in 1977. There were 898,500 reported visits, or 10.1 visits per patient, almost the same ratio (10.2) reported in 1977. Of those women reporting complete prenatal care histories, 77.9 percent began care during the first trimester. Only 5.1 percent failed to receive care before the third trimester. Of those receiving care in the first trimester of pregnancy, 12.3 percent reported prenatal care during the first month of pregnancy. Most women began care in the second month (39.6%) or third month (26.1%). Data for 1977 showed less than 10 percent beginning care in the first month, 37.3 percent during the second month, and 27.7 percent during the third month.

The birth rate for Sussex County (15.8) was the highest among New Jersey's twenty-one counties. Atlantic (13.3), Camden (14.8), Cumberland (14.9), Essex (14.7), Gloucester (14.2), Hudson (14.5), Ocean (13.0), Passaic (13.6), Salem (13.6), and Warren (13.6) counties all reported birth rates higher than the State average of 12.7. Bergen County reported the lowest birth rate (9.5). In 1978, the cities of Camden (23.7) and Newark (20.9) reported the highest birth rates among selected cities examined.

MARRIAGES

In 1978, the number of marriages increased for the first time since 1973, reversing a four-year decline. At 52,993, the number of marriages was up 2,316 from 1977, a 4.6% increase. The rate per thousand population was 7.2, the highest since 1975 when the rate was also 7.2.

The average age at marriage has continued to rise for both brides and grooms. In 1978, the average age for brides and grooms rose 0.3 years to 26.7 and 29.4 years, respectively. The average age at marriage continues to rise as more divorced persons remarry and as the trend toward later first marriages continues. Of all men married in 1978, 27.1% were previously married, an increase of 1.0% from 26.1% in 1977. The 1978 data also show that 24.3% of the brides were previously wed, an increase of 1.1% from the 1977 proportion of 23.2%. As first marriages are contracted at a later age, the proportion of brides and grooms marrying before age 25 has continued to decline. In 1978, 57.2% of the brides married before age 25, down from 60.0% in 1977 and 72.1% in 1970. The percentage of grooms marrying before age 25 was 40.6% in 1978, a decrease from 43.6% in 1977 and 57.3% in 1970.

Sheet 101

MORTALITY

The mortality rate, the ratio of deaths to population size, has been declining steadily. The mortality rate declined in 1978 to 886.6 per 100,000 persons, the lowest rate on record and a continuation of the steady decline over the last three decades. The ten leading causes of death in 1978 were the same as in 1977: (1) diseases of the heart, (2) malignant neoplasms, (3) cerebrovascular disease, (4) accidents, (5) influenza and pneumonia, (6) diabetes mellitus, (7) cirrhosis of the liver, (8) other diseases of the arteries, arterioles and capillaries, (9) arteriosclerosis and (10) certain causes of mortality in early infancy. Mortality rates for diseases of the heart declined from 377.2 to 374.4 deaths per 100,000 population. Deaths due to malignant neoplasms increased from 203.1 to 205.7 per 100,000 population. Diseases of the heart and malignant neoplasms continued to account for about 65 percent of all deaths. Mortality rates for the remaining eight leading causes of death declined for all except two: diabetes mellitus, which increased 0.6 per 100,000 population; and arteriosclerosis, which increased 0.2 per 100,000 population.

There were 30,849 white male deaths, 27,629 white female deaths, 3,873 nonwhite male deaths, and 2,810 nonwhite female deaths. Mortality rates for white females and nonwhite males increased while the rates for white males and nonwhite females decreased. The 1978 white male rate was 994.8 deaths per 100,000 persons compared with a 1977 rate of 1006.6. The white female rate increased from 833.7 in 1977 to 834.6 in 1978. The nonwhite male death rate increased slightly from 863.9 to 877.6 deaths per 100,000 nonwhite males. There were 566.1 nonwhite female deaths per 100,000 population in 1978 compared with a 1977 rate of 604.0.

Infant mortality involves deaths of persons under one year of age, and is usually measured relative to the number of live births recorded during the same year. In 1978, the number of infant deaths (1,145) and the infant mortality rate (12.3 deaths per 1,000 live births) were the lowest recorded in New Jersey. The infant mortality rate for 1978 was 15.5 percent lower than the rate for 1977.

The ten leading causes of infant death in 1978 were: (1) congenital anomalies, (227); (2) symptoms and ill-defined conditions, (127); (3) immaturity, unqualified, (120); (4) asphyxia of newborn, specified and unspecified, (101); (5) respiratory distress syndrome, (74); (6) hyaline membrane disease, (72); (7) complications of pregnancy, (62); (8) all other conditions of newborn, (59); (9) birth injury without mention of cause, (39); and (10) pneumonia, (34). For the same ten leading causes of death in 1977 and 1978, the number of deaths declined in 1978 for all causes except asphyxia of newborn, which increased from 100 to 101. For the leading cause of infant death, congenital anomalies, a decrease of 18.9 percent was reported.

There were 691 white and 454 nonwhite infant deaths in 1978 compared to 889 white and 466 nonwhite infant deaths in 1977. Using estimated birth figures by race, the white infant mortality rate decreased from 12.2 to 9.6 deaths per 1,000 live births, while the nonwhite infant mortality rate decreased from 24.2 to 22.6 deaths per 1,000 live births.

Most infant deaths occurred during the first month of life. Such deaths are referred to as neonatal deaths. In 1978, there were 812 neonatal deaths (70.9 percent of all infant deaths). The percent of infant deaths occurring during the first month of life, which had not changed substantially in the previous twenty-five years, dropped significantly in 1978. The mortality rate of 8.7 based on 812 deaths was the lowest ever recorded in New Jersey. The number of neonatal deaths declined nearly 20 percent from 1977 to 1978, while the neonatal mortality rate dropped from 10.8 to 8.7. There were 510 white and 302 nonwhite neonatal deaths reported in 1978 with rates of 7.1 and 15.0 respectively. Both are reductions from the estimated rates of 9.6 and 16.4 deaths per 1,000 births reported in 1977.

A fetal death (stillbirth) is defined as a death occurring prior to complete expulsion or extraction of a fetus from its mother. Another commonly used term is spontaneous abortion. Fetal deaths occurring after the completion of twenty or more weeks gestation are required by law to be reported to the state registrar. In 1978, the prior three-year increase in the number of fetal deaths, and the corresponding fetal death rate, was reversed. The 929 fetal deaths and 10.0 fetal death rate reported in 1978 are the lowest on record. The fetal death rate in the white population fell from 10.3 to 8.5 in 1978. Among nonwhites the fetal death rate fell from 17.0 to 15.7 during the same period.

Perinatal mortality is a composite statistic used to measure the critical period in human development just prior to birth and shortly thereafter. Perinatal mortality, as presented in this report includes fetal deaths plus neonatal deaths. The perinatal mortality rate declined from 22.1 to 18.5 deaths per 1,000 live births plus fetal deaths.

Maternal deaths continued to decline in 1978. The 9 deaths reported in 1978 were 4 lower than the 13 reported in 1977. There were 5 white and 4 nonwhite deaths.

MORBIDITY

Morbidity data are collected and compiled for all reportable diseases in New Jersey. The Tuberculosis Services Program collects information for all tuberculosis cases occurring in New Jersey. Incidence data on syphilis and gonorrhea are collected by the Venereal Disease Control Program. Information on other diseases which are, by law, required to be reported, are collected by the Communicable Disease Program of the Division of Laboratories and Epidemiology. These diseases include amebiasis, aseptic meningitis, meningococcal infections, mumps, pertussis, rubella, salmonellosis, shigellosis, tetanus, trichinosis, tularemia, typhoid fever and typhus. Requests for detailed information regarding any of these disease conditions should be addressed to the Programs collecting the data.

Tuberculosis

In 1978, the incidence of tuberculosis continued to decline. New cases of tuberculosis numbered 1,105, 15.0 per 100,000 population. In 1977, 1,351 new cases of tuberculosis were diagnosed (18.4 per 100,000). The number of deaths attributed to tuberculosis in 1978 was 104, the same as in 1977. The mortality rate in 1978 remained at the 1977 level of 1.4 deaths per 100,000 population.

The number of newly reported cases of tuberculosis among men exceeds the number reported among women. The tuberculosis morbidity rate is lowest among persons aged 5-14, increasing with age. There were 34.6 newly diagnosed cases reported for every 100,000 persons aged 65 and older. Among men aged 65 and older, 166 new cases were reported compared to 99 cases among women, resulting in morbidity rates of 54.3 and 21.5, respectively. Overall, 655 tuberculosis cases were reported in the male population compared to 450 cases among women. The male morbidity rate was 18.5 while the female rate was 11.8.

In 1978, there were 1,105 clinically active cases of tuberculosis in the population. The active case rate was 15.0 per 100,000 persons, statewide. Highest active case rates were reported in Essex (29.3), Hudson (22.0), Passaic (17.8) and Mercer (15.4) counties. Among the larger cities in New Jersey, morbidity rates were highest in Newark (53.6), Trenton (41.5), Jersey City (40.4), Passaic (37.4), Plainfield (34.6) and Elizabeth (30.2).

Venereal Disease

In 1978, 1,804 cases of syphilis produced a rate of 24.5 per 100,000 population compared to a 1977 rate of 25.8. The number of primary and secondary cases dropped from 374 to 357 with a corresponding drop in the morbidity rate from 5.1 to 4.9 cases per 100,000. The number of diagnosed cases of early latent syphilis decreased 8.1 percent while the rate dropped from 5.9 to 5.4 per 100,000. These data include resident cases only. A total of 1,804 cases of syphilis were reported in 1978 including 357 primary and secondary cases, 395 early latent cases, 1,030 late latent cases,

and 22 cases of congenital syphilis. The number of resident cases of gonorrhea has climbed from 18,837 in 1977 to 20,221 cases in 1978. The morbidity rate rose from 256.3 to 275.1 cases per 100,000 population.

There were 1,031 male (29.1 per 100,000), and 773 female (20.3 per 100,000) cases of syphilis in 1978. Incidence of primary and secondary stage cases of syphilis was nearly three times higher among men (7.2 vs. 2.7), while incidence of early latent syphilis was nearly doubled (7.1 vs. 3.7). Highest incidence rates were reported among persons 20-24 years of age (47.6 per 100,000), and those aged 25-44 (40.4 per 100,000). Incidence of gonorrhea was nearly twice as great among men as compared to women (363.2 vs. 193.2 per 100,000). The highest incidence occurred among persons aged 20-24 (1,285.0 per 100,000) where better than one out of every hundred persons in this age group contracted the disease. Among persons aged 15-19, 773.5 cases per 100,000 persons were reported, while one in every 324 persons aged 25-44 contracted this disease.

Hepatitis

The number of reported cases of infectious hepatitis (A), serum hepatitis (B), and hepatitis (unspecified), declined in 1978. There were 653 cases of infectious hepatitis in 1978 compared with 844 cases in 1977. The incidence rate dropped from 11.5 to 8.9 over the one year period. Serum hepatitis cases declined from 809 (11.0 per 100,000) to 750 (10.2 per 100,000). Twenty-six percent fewer cases of hepatitis (unspecified) were reported, while the incidence rate dropped from 4.0 to 2.9 cases per 100,000 population. Hepatitis incidence was higher for men than women. There were 11.3 cases of infectious hepatitis per 100,000 men compared with 6.6 cases for every 100,000 women. The male rate for serum hepatitis was 13.0 compared to a female rate of 7.6. A total of 126 cases of hepatitis (unspecified) were reported among men (3.6 per 100,000) compared with 90 female cases (2.4 per 100,000). The highest incidence of hepatitis was reported among persons aged 20-24. The infectious hepatitis rate was 33.0 per 100,000, the serum hepatitis rate was 36.7, and the hepatitis (unspecified) rate was 6.6 per 100,000 persons in this age group.

Other Notifiable Diseases

Occurrence of certain diseases are required by law, to be reported to the State Health Department. These diseases include mumps, measles (rubeola), rubella (German Measles), typhoid fever, malaria, aseptic meningitis, and a host of other diseases. In 1978 reports for some of these disease conditions showed marked declines, while for others, dramatic increases were observed.

The number of cases of measles (rubeola) dropped from 210 in 1977 to 75 in 1978, a decrease of 64.3 percent. The number of cases of measles fluctuates enormously from year to year. In 1975, 477 cases were reported,

while in 1974 there were 5,693 cases. The number of cases of rubella (German Measles) dropped by 8.5 percent with 1,625 cases reported in 1978 compared to 1,775 in 1977, 1,483 in 1976, and only 1,012 in 1975. Salmonellosis cases (excluding typhoid fever) dropped from 1,817 in 1977 to 1,331 in 1978. In 1976, 1,211 cases were noted. There were 722 cases of shigellosis (bacillary dysentery) in 1977 compared with 472 cases in 1978, a decrease of 34.6 percent. In 1976, 186 cases were reported. The number of cases of mumps decreased 48.1 percent with 200 cases in 1978 compared to 385 in 1977. In 1976 there were 603 cases, while in 1975, 465 cases were reported, again showing year to year fluctuation. The number of cases of aseptic meningitis rose in 1978 with 378 reported cases compared to 208 in 1977, 197 in 1976, and 345 in 1975. There were 2 cases of trichinosis in 1978, and 51 in 1977. Other diseases reported included amebiasis (42), malaria (30), meningococcal infection (76), pertussis (2), typhoid fever (8), and typhus (Rocky Mountain Spotted Fever) (13).

Of the 1,625 rubella (German Measles) cases, 468 occurred in Camden County, 313 in Mercer County, 288 in Burlington County and 217 in Cumberland County. Almost half of the shigellosis cases occurred in Essex County (208 cases). Twenty-two of the 42 cases of amebiasis reported in 1978 occurred in Cumberland County.

Note: Clinically active cases are those with a culture positive for M. tuberculosis or those on two or more anti-tuberculosis drugs. The count includes those with a previous episode of tuberculosis who have developed disease again if more than 12 months have elapsed since they were discharged from supervision as having completed treatment.

Glossary of Terms

AGE-SPECIFIC MORTALITY RATE - the number of deaths of persons of a given age group per 100,000 estimated persons in that age group usually expressed as an annual rate.

CAUSE GROUP - a summary of deaths resulting from, or cases of, related diseases as defined by the International Classification of Diseases Adapted For Use in the United States, published by the U. S. Department of Health, Education, and Welfare; usually specified by a series of 3-digit codes i.e. 140-209 - malignant neoplasms.

CAUSE-3 DIGIT - the cause of death or morbidity as defined by a 3-digit code in the International List. Disease conditions are also further classified and so specified, by the addition of a decimal point and a fourth digit. For example, the three digit code "140" refers to a malignant neoplasm of the lip, and the four digit code "140.1" refers to a malignant neoplasm of the lower lip.

ESTIMATED POPULATION - the estimated number of persons in a given group based on the latest census data and adjusted for annual births, annual deaths and net migration.

FETAL DEATH - a death prior to complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy also known as a stillbirth. The death of an infant that has breathed or shown other evidence of life, no matter for how short a period, should be reported as a live birth and an infant death.

FETAL DEATH RATES - the number of fetal deaths occurring in the twentieth week of gestation or later (required by law to be registered as fetal deaths) per 1,000 live births, usually expressed as an annual rate.

FERTILITY RATE - the number of live births to women aged 15-44 per 1,000 women in this age group, usually expressed as an annual rate.

ILLEGITIMATE BIRTH - a birth to an unwed mother, or to a mother whose husband did not father the infant.

ILLEGITIMATE FETAL DEATH - a fetal death occurring to an unwed mother, or a mother whose husband did not father the fetus.

INFANT DEATH - the death of a baby under one year of age, no matter how short a period a time the baby breathed or shown other evidence of life.

INFANT MORTALITY RATE - the number of infant deaths per 1,000 live births, usually expressed as an annual rate.

INTERNATIONAL LIST - a listing of disease classifications known as the "Eighth Revision International Classification of Diseases Adapted For Use in the United States", published by the United States Department of Health, Education, and Welfare, used in the statistical coding and tabulation of specific disease morbidity and mortality.

LEGITIMATE BIRTH - a birth to a married woman whose husband fathered the infant.

LEGITIMATE FETAL DEATH - a fetal death occurring to a married woman whose husband fathered the fetus.

MATERNAL DEATH - a death of a woman occurring during the period of pregnancy or following delivery of the infant and related to the pregnancy or delivery of the infant.

MATERNAL MORTALITY RATE - the number of maternal deaths per 10,000 live births, usually expressed as an annual rate.

MORBIDITY - the relative incidence (number of cases) of disease, usually used with respect to specific disease conditions i.e. tuberculosis morbidity refers to the number of cases of tuberculosis.

MORTALITY - the number of deaths.

NEONATAL - of, relating to, or affecting the newborn and especially the human infant during the first month of life.

NEONATAL MORTALITY RATE - as used in this text, the number of deaths of infants under 28 days of age per 1,000 live births, per year.

NET MIGRATION - the difference in population resulting from persons attaining residency status, and persons dropping residency status, often referred to as in-migration and out-migration, respectively.

PERINATAL - of, relating to, or affecting the fetus and the newborn, especially the human infant during the first month of life.

PERINATAL MORTALITY RATE - the number of deaths of infants less than 28 days of age, and registered fetal deaths per 1,000 live births plus registered fetal deaths.

RACE-SPECIFIC MORTALITY RATE - the number of deaths in a given ethnic group per 100,000 estimated population in that ethnic group.

SELECTED PLACES - as used in this report, cities, townships and municipalities with a population of 45,000 or more as of the 1970 census.

SEX-SPECIFIC MORTALITY RATE - the number of deaths of males/females per 100,000 estimated males/females in the population.
