INTRODUCTION

This report is the first in a new series of annual mortality statistics publications. Statistics for all municipalities are included in the report for the first time.

The tables have been changed from previous publications in content and format to facilitate more rapid reproduction and distribution of the data as it becomes available. This edition of the annual mortality statistics report is part of an extended series of separate publications of similar format on births, marriages, abortions, and morbidity. It is hoped that the user will find the new format more informative and easier to reference.

Statistics provided in this publication are data summarized from death certificates filed with the New Jersey State Registrar as required by New Jersey vital statistics legislation. Deaths to New Jersey residents occurring out-of-state are recorded in the state of occurrence and forwarded to the New Jersey State Registrar. All individual identifiers are removed prior to tabulation of data for statistical purposes.

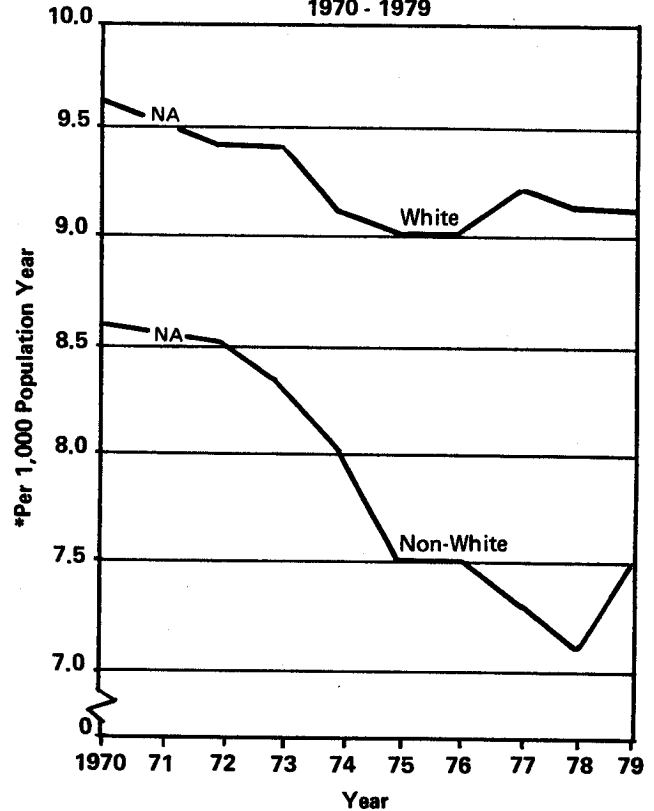

OVERVIEW

MORTALITY RATE

There were 65,495 New Jersey resident deaths in 1979, an increase of 334 over 1978. The mortality rate, the ratio of deaths to population size, increased slightly from 890.7 to 893.3 per 100,000 population. Nationally, the mortality rate in 1979 (866.2 deaths per 100,000 population) was 1.9 percent lower than the rate for 1978 (883.4).

In New Jersey, the mortality rate for males, 980.4, was higher than for females-812.2. The white population rate of 913.6 was higher than the nonwhite population rate of 749.1 for the year. Observation of population groups divided by both race and sex show that the highest mortality rate occurred among white males, 992.7, and the lowest rate among nonwhite females - 626.2. The mortality rate increased for all nonwhites and white females. Only for white males was the mortality rate lower in 1979 than in 1978. The rates for females increased 4.8 and 60.1 per 100,000

**MORTALITY RATES*
WHITE AND NON-WHITE
1970 - 1979**

population, for whites and nonwhites, respectively. For white males, the rates decreased 2.1 and for nonwhite males increased 9.7 per 100,000 population.

Comparisons of age-specific mortality rates for whites and nonwhites show higher mortality rates for nonwhites in age groups under 65 years of age. For the population 65 years of age and older, the mortality rate was higher among whites than among nonwhites. The difference between the two populations was most pronounced for the 25-44 year age group where the mortality rate for nonwhites, 329.8, was more than twice the rate for whites, 141.4.

For males, age-specific mortality rates were higher for all age groups than the corresponding rates for females. In the 15-24 year age group the male rate, 150.8 was more than three times the female rate - 49.4. The mortality rate for males aged 25-44, 229.3, was more than twice the rate for females - 109.0.

**MORTALITY RATES*
UNITED STATES AND NEW JERSEY
1965 - 1979**

Cape May County had the highest mortality rate, 1458.6, among New Jersey's twenty-one counties. The lowest rate, 636.6, occurred in Somerset County. Thirteen counties registered increases from 1978 while decreases in the rate occurred in seven counties. The following counties had mortality rates higher than the State average: Atlantic (1290.3), Cape May (1458.6), Cumberland (961.1), Essex (995.2), Hudson (1092.4), Mercer (907.1), Monmouth (901.1), Ocean (1178.6), Passaic (917.6), Salem (950.0), Union (931.6), and Warren (903.2).

LEADING CAUSES *

Despite reclassification of some diseases in the Ninth Revision International Classification of Diseases, the ten leading causes of death in 1979 were the same as in 1978 and 1977: (1) diseases of the heart, (2)

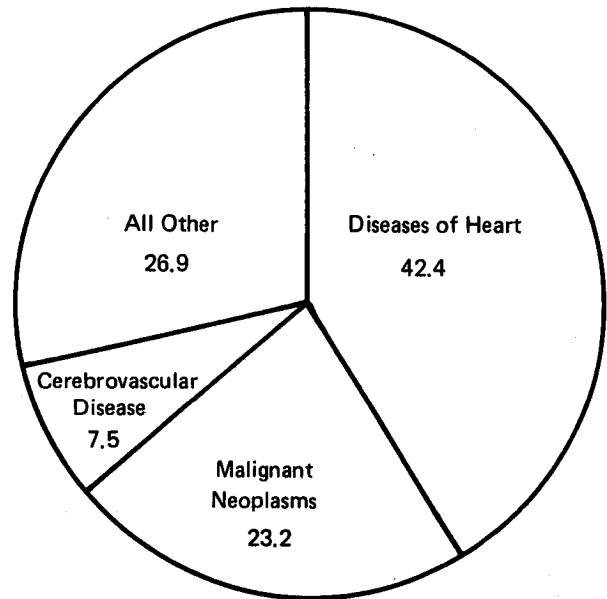

malignant neoplasms, (3) cerebrovascular disease, (4) accidents, (5) pneumonia and influenza, (6) diabetes mellitus, (7) chronic liver disease and cirrhosis, (8) arteriosclerosis, (9) early infant mortality, and (10) artery, arterioles and capillary disease. Mortality rates for diseases of the heart and malignant neoplasms increased from the previous year. These diseases as the two leading causes of death, continued to account for approximately two-thirds of all deaths. The mortality rate for the third leading cause of death, cerebrovascular disease, declined over the year.

*Ninth Revision, International Classification of Diseases, was introduced for the coding of 1979 data. See Appendix A for comparability of 1979 data with data published in previous years.

**LEADING CAUSES OF DEATH
1969**

**LEADING CAUSES OF DEATH
1979***

* See Appendix A for Ninth Revision ICD Coding Changes effective 1979

FETAL DEATHS

Data by age groups show that accidents were the leading cause of death for the population under 45 years of age. For the population aged 45 years and older, diseases of the heart were the leading cause of death. Malignant neoplasms were the second leading cause of death for all age groups beyond infancy.

INFANT DEATHS

Infant mortality refers to deaths of persons under one year of age and is usually measured relative to the number of live births recorded during the same year. In 1979, the number of infant deaths rose to 1,223 from the previous year's level of 1,145, an increase of 78 deaths. The infant mortality rate rose 0.5 to 12.8 per 1,000 live births from 1978 to 1979.

There were 764 white infant deaths and 456 nonwhite infant deaths. The infant mortality rate for whites was 10.4, an increase of 0.8 from the 1978 rate of 9.6 infant deaths per 1,000 live births. Among nonwhites the infant mortality rate decreased 0.2 from 22.6 to 22.4 infant deaths per 1,000 live births.

NEONATAL DEATHS

Most infant deaths occurred during the first month of life. These deaths are referred to as neonatal deaths. In 1979, there were 873 neonatal deaths, 61 more such deaths than were reported in 1978. The neonatal mortality rate 9.1, increased 0.4 per 1,000 births, from the 1978 level of 8.7, the lowest rate ever recorded in the State.

There were 566 white and 305 nonwhite neonatal deaths recorded. The neonatal mortality rates for whites and nonwhites were 7.7 and 15.0, respectively. The rate for whites increased 0.6 per 1,000 live births, while the rate for nonwhites, 15.0, remained constant from 1978 levels of 7.1 and 15.0, respectively.

A fetal death is defined as a death occurring prior to complete expulsion or extraction of a fetus from its mother. Other commonly used terms are stillbirth and spontaneous abortion. Fetal deaths occurring after the completion of twenty or more weeks of gestation are required by law to be reported to the State Registrar.

Fetal deaths in 1979 numbered 931, nearly the same as in 1978, when 929 such deaths were recorded. The fetal death rate, the number of fetal deaths per 1,000 live births continued the previous year's decline. The rate dropped 0.3 per 1,000 live births, from 10.0 to 9.7 over the year.

The number of white fetal deaths dropped from 610 in 1978 to 577 in 1979 while nonwhite fetal deaths increased from 316 to 324 during the same year. The fetal death rate for the white population fell from 8.5 to 7.8 in 1979. For the nonwhite population the rate remained nearly constant, rising only 0.2 from 15.7 in 1978 to 15.9 in 1979.

PERINATAL DEATHS

Perinatal mortality is a composite statistics used to measure the critical period in human development just prior to birth and shortly thereafter. Perinatal mortality, as presented in this report includes fetal deaths and neonatal deaths. There were 1,804 perinatal deaths in 1979, an increase of 63 from 1978. The perinatal mortality rate increased slightly from 18.5 to 18.7 deaths per 1,000 births plus fetal deaths. Rates for whites and nonwhites, recorded as 15.4 and 30.4, respectively, remained the same as in 1978.

MATERIAL DEATHS

Maternal deaths continued to decline in 1979. Eight deaths were reported, a decrease of one from nine deaths recorded in 1978.

APPENDIX

Comparability of Cause of Death Data, Eighth and Ninth Revision International Classification of Diseases

The introduction of the Ninth Revision International Classification of Diseases (ICD-9) for 1979 mortality data has changed the major categories of diseases in both title and content. Since the categories in ICD-9 (1979) differ from those under ICD-8 (1978) a measure of similarity is needed for comparisons. The comparability ratio developed by the U.S. Department of Health, Education, and Welfare, Public Health Service, is one such measure. For the national study, comparability ratios were based on all deaths in 1976 coded according to the Eighth Revision and a sample of these same 1976 deaths coded according to the Ninth Revision.

The comparability ratio is a fraction for which the denominator of a ratio for any particular cause is the number of deaths in 1976 assigned to that cause in accordance with the Eighth Revision; and the numerator is the estimate of the number of deaths in 1976 assigned to the comparable cause in accordance with the Ninth Revision. The numerators for these ratios were based on stratified random samples of death certificates from the National Center for Health Statistics' data file.

A comparability ratio of 1.00 indicates that the same number of deaths was assigned to a particular cause or combination of causes whether the Eighth or Ninth Revision was used. However, ratio showing perfect correspondence does not necessarily mean that the cause was unaffected by changes in classification and coding procedures because the changes may compensate for each other.

Usually a ratio of less than 1.00 results from one of two situations: (1) a decrease in assignments of deaths to a cause in the Ninth Revision compared to the Eighth or (2) the cause as described in the Ninth Revision is only a part of the Eighth Revision title with which it is compared.

Most frequently a ratio greater than 1.00 results from either: (1) An increase in assignments of deaths to a cause in the Ninth Revision compared to a comparable Eighth Revision Cause, or (2) the Ninth Revision title is broader than the Eighth Revision title with which it is compared.

The ratios are intended to measure the degree of discontinuity between data tabulated by the cause lists published under the Ninth Revision and data tabulated by the most nearly comparable cause lists published under the Eighth Revision.

APPENDIX

COMPARABILITY RATIOS FOR 72 SELECTED CAUSES: BASED ON A STRATIFIED RANDOM SAMPLE OF 1976 DEATHS
 ASSIGNED ACCORDING TO THE NINTH REVISION AND ON ALL DEATHS ASSIGNED ACCORDING TO THE EIGHT
 REVISION OF THE INTERNATIONAL CLASSIFICATION OF DISEASES: UNITED STATES

Cause of death (Ninth Revision of the International Classification of Diseases, 1975)	Estimated compara- bility ratio ¹
Shigellosis and amebiasis.....004,006	0.9818
Certain other intestinal infections.....007-009	0.1821
Tuberculosis.....010-018	0.7668
Tuberculosis of respiratory system.....010-012	0.8429
Other tuberculosis.....013-018	0.5077
Whooping cough.....033	0.8571
Streptococcal sore throat, scarlatina, and erysipelas.....034-035	1.4286
Meningococcal infection.....036	0.9788

COMPARABILITY RATIOS FOR 72 SELECTED CAUSES: BASED ON A STRATIFIED RANDOM SAMPLE OF 1976 DEATHS ASSIGNED ACCORDING TO THE NINTH REVISION AND ON ALL DEATHS ASSIGNED ACCORDING TO THE EIGHT REVISION OF THE INTERNATIONAL CLASSIFICATION OF DISEASES: UNITED STATES

Cause of death (Ninth Revision of the International Classification of Diseases, 1975)	Estimated comparability ratio ¹
Acute bronchitis and bronchiolitis.....466	0.8888
Pneumonia and influenza.....480-487	0.9264
Pneumonia.....480-486	0.9199
Influenza.....487	0.9714
Chronic obstructive pulmonary diseases and allied conditions.....490-496	1.8846
Bronchitis, chronic and unspecified.....490-491	0.9383
Emphysema.....492	0.9770
Asthma.....493	1.3544
Other chronic obstructive pulmonary diseases and allied conditions....494-496	1.0054 ²
Ulcer of stomach and duodenum.....531-533	1.1192
Appendicitis.....540-543	1.0080
Hernia of abdominal cavity and intestinal obstruction without mention of hernia.....550-553,560	0.9432
Chronic liver disease and cirrhosis.....571	1.0110
Cholelithiasis and other disorders of gallbladder.....574-575	1.0494
Nephritis, nephrotic syndrome, and nephrosis.....580-589	1.7397
Acute glomerulonephritis and nephrotic syndrome.....580-581	0.2422
Chronic glomerulonephritis, nephritis and nephropathy, not specified as acute or chronic, and renal sclerosis, unspecified..582-583,587	0.4954
Renal failure, disorders resulting from impaired renal function, and small kidney of unknown cause.....584-586,588-589	1.6327
Infections of kidney.....590	0.9878
Hyperplasia of prostate.....600	1.0232
Complications of pregnancy, childbirth, and the puerperium.....630-676	1.1000
Pregnancy with abortive outcome.....630-638	3.8125
Other complications of pregnancy, childbirth, and the puerperium.....640-676	0.9840
Congenital anomalies.....740-759	0.9984
Certain conditions originating in the perinatal period.....760-779	1.0765
Birth trauma, intrauterine hypoxia, birth asphyxia, and respiratory distress syndrome.....767-769	0.7483
Other conditions originating in the perinatal period.....760-766,770-779	1.4639
Symptoms, signs, and ill-defined conditions.....780-799	0.9102
All other diseases.....Residual	0.7786
Accidents and adverse effects.....E800-E949	0.9970
Motor vehicle accidents.....E810-E825	1.0117
All other accidents and adverse effects.....E800-E807,E826-E949	0.9841
Suicide.....E950-E959	1.0032
Homicide and legal intervention.....E960-E978	1.0057
All other external causes.....E980-E999	0.9675

¹Ratio of deaths assigned according to the Ninth Revision to deaths assigned according to the Eighth Revision.

²Comparability Ratio not based on sample data.

DEFINITIONS

Age-Specific Mortality Rate - the number of deaths of persons of a given age group per 100,000 estimated persons in that age group usually expressed as an annual rate.

Cause Group - a summary of deaths resulting from, or cases of, related diseases as defined by the International Classification of Diseases Adapted For Use in the United States, published by the U. S. Department of Health, Education, and Welfare; usually specified by a series of 3-digit codes i.e. 140-208 - malignant neoplasms.

Estimated Population - the estimated number of persons in a given group based on the latest census data and adjusted for annual births, annual deaths and net migration.

Fetal Death - a death prior to complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy also known as a stillbirth. The death of an infant that has breathed or shown other evidence of life, no matter for how short a period, should be reported as a live birth and an infant death.

Fetal Death Rates - the number of fetal deaths occurring in the twentieth week of gestation or later (required by law to be registered as fetal deaths) per 1,000 live births, usually expressed as an annual rate.

Infant Death - the death of a baby under one year of age, no matter how short a period a time the baby breathed or shown other evidence of life.

Infant Mortality Rate - the number of infant deaths per 1,000 live births, usually expressed as an annual rate.

ICD 9 Code - a listing of disease classifications known as the "Ninth Revision International Classification of Diseases Adapted For Use in the United States", published by the United States Department of Health, Education, and Welfare, used in the statistical coding and tabulation of specific disease morbidity and mortality.

Maternal Death - a death of a woman occurring during the period of pregnancy or following delivery of the infant and related to the pregnancy or delivery of the infant.

Maternal Mortality Rate - the number of maternal deaths per 10,000 live births, usually expressed as an annual rate.

Mortality - the number of deaths.

Neonatal - of, relating to, or affecting the newborn and especially the human infant during the first month of life.

Neonatal Mortality Rate - as used in this text, the number of deaths of infants under 28 days of age per 1,000 live births, per year.

Perinatal - of, relating to, or affecting the fetus and the newborn, especially the human infant during the first month of life.

Perinatal Mortality Rate - the number of deaths of infants less than 28 days of age, and registered fetal deaths per 1,000 live births plus registered fetal deaths.

Race-Specific Mortality Rate - the number of deaths in a given ethnic group per 100,000 estimated population in that ethnic group.

Sex-Specific Mortality Rate - the number of deaths of males/females per 100,000 estimated males/females in the population.
